Behavior Dynamics in Media-Sharing Social Networks H. Vicky Zhao,W. Sabrina
 Lin,K. J. Ray Liu,2011-04-14 In large scale media sharing social networks where millions of users create share link and reuse
 media content there are clear challenges in protecting content security and intellectual property and in designing scalable
 and reliable networks capable of handling high levels of traffic This comprehensive resource demonstrates how game theory
 can be used to model user dynamics and optimize design of media sharing networks It reviews the fundamental
 methodologies used to model and analyze human behavior using examples from real world multimedia social networks With a
 thorough investigation of the impact of human factors on multimedia system design this accessible book shows how an
 understanding of human behavior can be used to improve system performance Bringing together mathematical tools and
 engineering concepts with ideas from sociology and human behavior analysis this one stop guide will enable researchers to
 explore this emerging field further and ultimately design media sharing systems with more efficient secure and personalized
 services

Cooperative Environments for Distributed Systems Engineering Khalil Drira, Andrea Martelli, Thierry Villemur, 2003-06-30 The engineering life cycle for complex systems design and development where partners are dispersed in different locations requires the set up of adequate and controlled processes involving many different disciplines The design integration and the final system physical functional integration and qualification imply a high degree of cross interaction among the partners The place technical information systems supporting the life cycle activities are specialized with respect to the needs of each actor in the process chain and are highly heterogeneous between them To globally innovate in place processes specialists must be able to work as a unique team in a virtual enterprise model To this aim it is necessary to make interoperable the different technical information systems and to define co operative engineering processes which take into account distributed roles shared activities and distributed process controls In this frame an innovative study aimed at addressing this process with the goal of identifying proper solutions in terms of design implementation and deployment has been carried out with the support of the European Community and the participation of major industrial companies and research centers
