Zhiqiang Chen,Kai Wang,Guanrong Chen,2019-10-03 After the invention of a new mechanical element called inerter in 2002
research interest in passive network synthesis has been revived and this field has again become active and essential The
unique compendium highlights the synthesis of passive electrical or mechanical networks which is motivated by the vibration
control based on a new type of mechanical elements named inerter It introduces important fundamental concepts of passive
network synthesis and presents recent results on this topic These new results concern mainly the economical realizations of
low degree functions as RLC networks damper spring inerter networks the synthesis of n port resistive networks and the
synthesis of low complexity mechanical networks They can be directly applied to the optimization and design of various
inerter based mechanical control systems such as suspension systems vibration absorbers building vibration systems etc This
