Christine Wall, 2013-07-04 This book is unique in describing the history of post war reconstruction from an entirely new perspective by focusing on the changing relationship between architects and building workers It considers individual as well as collective interactions with technical change and in doing so brings together for the first time an extraordinary range of sources including technical archives oral history and visual material to describe the construction process both during and in the decades after the war It focuses on the social aspects of production and the changes in working life for architects and building workers with increasing industrialization in particular analysing the effect on the building process of introducing dimensionally co ordinated components Both architects and building workers have been accused of creating a built

environment now popularly discredited architects responsible for poor design and building workers for poor workmanship. However many of the structures and ideas underpinning this period of rapid change were revolutionary in their commitment to a complete transformation of the building process. An Architecture of Parts adds to the growing literature on changes in the building world during and immediately after the Second World War. It is significant both empirically and historically in its examination of the ideas, technology and relationships that fired industrialization of the building process in mid century Britain.

Churches and Chapels Martin Purdy, 2014-05-15 Churches and Chapels: A Design and Development Guide is a reference for structure approach to design, development or alteration of a building. The book deals with designing or altering traditional Western congregational halls and places of worship through a harmonious rendering of religious worship and social action. Part I of the book focuses on background, presenting general ideas and influences that made today's churches. Questions such as adapt or replace and concerns about design are addressed. This part also examines the role of today's clients and the possible types of churches and chapels that will prove desirable and satisfactory. Part II discusses the design process, covering the need for a feasibility study and agreed design development. The feasibility study addresses retention of parts of the structure, size of the structure, costs and consideration of other building designs. Design analysis involves evaluation of the architectural considerations that include Western congregational halls design ideas, check ups and sketching. The details of the scheme design contain precise information that will serve as basis for the client to modify or accept and for the authorities to approve. Throughout this book case studies that are relevant for each topic are also given. This guide is useful for administration of local parochial and district congregations. This book can likewise be appreciated by architects and structural engineers.

Design-Tech: Building Science for Architects Jason Alread, Thomas Leslie, Rob Whitehead, 2025-03-19 The third edition of Design Tech provides an indispensable holistic resource for integrating building technologies into critically designed performance based architectural projects. The book's format follows the developmental stages of a typical architectural project; it provides a step by step process for addressing and integrating building sciences from first principles of human comfort, materials, structures and environmental systems to advanced construction systems and measures of building performance. Short chapters incorporate easy to understand information with hundreds of useful illustrations, tables and references that explain the why as well as the how of building science. The content focuses on what designers need to know in the studio to create sustainably designed integrated buildings and it prepares them for future discussions with engineers, contractors and consultants. The updated format builds a coherent framework for integrated project design studio development necessary for all contemporary accredited schools of architecture. Chapters build upon critical project information from schematics toward technical integration. New chapters emphasize performance based design strategies including sustainable design values, critical schematic planning, enhanced building envelope design strategies and advanced performance systems. Enhanced visualization of schematic design strategies helps explain sustainable design.
