Neuro Adaptive Process Control A Practical Approach:

Neuro-Adaptive Process Control Peter M. Mills, Albert Y. Zomaya, Moses O. Tadé, 1996-01-30 Using a series of rigorous authentic examples the authors demonstrate several simple yet practical techniques for utilizing adaptive neural networks to produce more efficient process control Their in depth description of implementation issues offers a wealth of pragmatic wisdom

Nonlinear Model-based Process Control Rashid M. Ansari, Moses O. Tade, 2012-12-06 The series *Advances in Industrial Control* aims to report and encourage technology transfer in control engineering The rapid development of control technology has an impact on all areas of the control discipline New theory new controllers actuators sensors new industrial processes computer methods new applications new philosophies new challenges Much of this development work resides in industrial reports feasibility study papers and the reports of advanced collaborative projects The series offers an opportunity for researchers to present an extended exposition of such new work in all aspects of industrial control for wider and rapid dissemination The last decade has seen considerable interest in reviving the fortunes of non linear control In contrast to the approaches of the 60S 70S and 80S a very pragmatic agenda for non linear control is being pursued using the model based predictive control paradigm This text by R Ansari and M Tade gives an excellent synthesis of this new direction Two strengths emphasized by the text are i four applications found in refinery processes are used to give the text a firm practical continuity ii a non linear model based control architecture is used to give the method a coherent theoretical framework

Scheduling in Parallel Computing Systems Shaharuddin Salleh,Albert Y.

Zomaya,2012-12-06 Scheduling in Parallel Computing Systems Fuzzy and Annealing Techniques advocates the viability of using fuzzy and annealing methods in solving scheduling problems for parallel computing systems The book proposes new techniques for both static and dynamic scheduling using emerging paradigms that are inspired by natural phenomena such as fuzzy logic mean field annealing and simulated annealing Systems that are designed using such techniques are often referred to in the literature as intelligent because of their capability to adapt to sudden changes in their environments Moreover most of these changes cannot be anticipated in advance or included in the original design of the system Scheduling in Parallel Computing Systems Fuzzy and Annealing Techniques provides results that prove such approaches can become viable alternatives to orthodox solutions to the scheduling problem which are mostly based on heuristics Although heuristics are robust and reliable when solving certain instances of the scheduling problem they do not perform well when one needs to obtain solutions to general forms of the scheduling problem On the other hand techniques inspired by natural phenomena have been successfully applied for solving a wide range of combinatorial optimization problems e g traveling salesman graph partitioning The success of these methods motivated their use in this book to solve scheduling problems that are known to be formidable combinatorial problems Scheduling in Parallel Computing Systems Fuzzy and Annealing Techniques is an excellent reference and may be used for advanced courses on the topic

Model-Based

Signal Processing James V. Candy, 2005-10-13 A unique treatment of signal processing using a model based perspective Signal processing is primarily aimed at extracting useful information while rejecting the extraneous from noisy data If signal levels are high then basic techniques can be applied However low signal levels require using the underlying physics to correct the problem causing these low levels and extracting the desired information Model based signal processing incorporates the physical phenomena measurements and noise in the form of mathematical models to solve this problem Not only does the approach enable signal processors to work directly in terms of the problem s physics instrumentation and uncertainties but it provides far superior performance over the standard techniques Model based signal processing is both a modeler s as well as a signal processor s tool Model Based Signal Processing develops the model based approach in a unified manner and follows it through the text in the algorithms examples applications and case studies The approach coupled with the hierarchy of physics based models that the author develops including linear as well as nonlinear representations makes it a unique contribution to the field of signal processing The text includes parametric e g autoregressive or all pole sinusoidal wave based and state space models as some of the model sets with its focus on how they may be used to solve signal processing problems Special features are provided that assist readers in understanding the material and learning how to apply their new knowledge to solving real life problems Unified treatment of well known signal processing models including physics based model sets Simple applications demonstrate how the model based approach works while detailed case studies demonstrate problem solutions in their entirety from concept to model development through simulation application to real data and detailed performance analysis Summaries provided with each chapter ensure that readers understand the key points needed to move forward in the text as well as MATLAB r Notes that describe the key commands and toolboxes readily available to perform the algorithms discussed References lead to more in depth coverage of specialized topics Problem sets test readers knowledge and help them put their new skills into practice The author demonstrates how the basic idea of model based signal processing is a highly effective and natural way to solve both basic as well as complex processing problems Designed as a graduate level text this book is also essential reading for practicing signal processing professionals and scientists who will find the variety of case studies to be invaluable An Instructor s Manual presenting detailed solutions to all the problems in the book is available from the Wiley editorial department

Computational Intelligence. Theory and Applications Bernd Reusch, 2003-06-30 Ten years of Fuzzy Days in Dortmund What started as a relatively small workshop in 1991 has now become one of the best known smaller conferences on Computational Intelligence in the world It fact it was to my best knowledge the rst conference to use this term in 1994 although I confess that another larger conference was announced rst and the trade mark Computational Intelligence was not coined in Dortmund I believe that the success of this conference is grounded on the quality of its reviewed and invited papers as well as its good organization From the beginning we have sent every paper anonymously to ve referees and we have always accepted only around 50% of the papers sent In This year it was a little less than that I would like to thank everybody who helped us by considering Dortmund s Fuzzy Days as the conference at which to appear I know that among the stracts not accepted there were some quite good ones but we were restricted to a xed number I also know that referees do a good job but cannot always judge wisely from abstracts Hence my apologies to those who did not make it this year Please try again I would like to point out that our conference also has a good regional re tation I am grateful to the City of Dortmund its Lord Mayor Dr Langemeyer the Dortmund project the DFG Deutsche Forschungsgemeinschaft the KVR Kommunalverband Ruhrgebiet the Martin Schmei er Stiftung and the C line AG Quantum GmbH for their valuable support
