

The background of the book cover is an abstract, glowing network of interconnected nodes and edges, resembling a complex web or a neural network. The nodes are small, bright circles, and the edges are thin, glowing lines. The overall color palette is dark blue and purple, with the network elements glowing in a light blue or cyan. The network structure is dense and fills the entire frame, creating a sense of depth and complexity.

Networks , 2009 In the last 20 years interest in network phenomena has grown immensely among anthropologists psychologists political scientists economists and lawyers Empirical observation shows that network arrangements can be found in many branches of business This is often linked to rapid changes in today's markets and technologies but it is not the only reason Legal institutions have been at the centre of private law since the industrial revolution but today contracts and corporations cannot cope with the risks and opportunities posed by networks Legal practice needs solutions which go beyond the classical traditions of thinking in the dichotomy of contract and corporation This volume is the outcome of a conference held in Fribourg Switzerland which focused on the legal treatment of contractual networks in particular questions of network expectations the fragility of network institutions and the question of how law can minimise network specific risks towards third parties The contributors among them many of the world's leading scholars in this field include Roger Brownsword Simon Deakin Gunther Teubner Hugh Collins and Marc Amstutz The book will be of interest to scholars of contract corporate law and legal theory

Introduction to Averaging Dynamics over Networks Fabio Fagnani, Paolo Frasca, 2017-11-09 This book deals with averaging dynamics a paradigmatic example of network based dynamics in multi agent systems The book presents all the fundamental results on linear averaging dynamics proposing a unified and updated viewpoint of many models and convergence results scattered in the literature Starting from the classical evolution of the powers of a fixed stochastic matrix the text then considers more general evolutions of products of a sequence of stochastic matrices either deterministic or randomized The theory needed for a full understanding of the models is constructed without assuming any knowledge of Markov chains or Perron Frobenius theory Jointly with their analysis of the convergence of averaging dynamics the authors derive the properties of stochastic matrices These properties are related to the topological structure of the associated graph which in the book's perspective represents the communication between agents Special attention is paid to how these properties scale as the network grows in size Finally the understanding of stochastic matrices is applied to the study of other problems in multi agent coordination averaging with stubborn agents and estimation from relative measurements The dynamics described in the book find application in the study of opinion dynamics in social networks of information fusion in sensor networks and of the collective motion of animal groups and teams of unmanned vehicles Introduction to Averaging Dynamics over Networks will be of material interest to researchers in systems and control studying coordinated or distributed control networked systems or multiagent systems and to graduate students pursuing courses in these areas

The Structure and Dynamics of Networks Mark Newman, Albert-László Barabási, Duncan J. Watts, 2011-10-23 From the Internet to networks of friendship disease transmission and even terrorism the concept and the reality of networks has come to pervade modern society But what exactly is a network What different types of networks are there Why are they interesting and what can they tell us In recent years scientists from a range of fields including mathematics physics computer science sociology and biology have been pursuing these questions and building a new science of networks This book brings together for the first time a set of seminal articles representing research from across these disciplines It is an ideal

sourcebook for the key research in this fast growing field The book is organized into four sections each preceded by an editors introduction summarizing its contents and general theme The first section sets the stage by discussing some of the historical antecedents of contemporary research in the area From there the book moves to the empirical side of the science of networks before turning to the foundational modeling ideas that have been the focus of much subsequent activity The book closes by taking the reader to the cutting edge of network science the relationship between network structure and system dynamics From network robustness to the spread of disease this section offers a potpourri of topics on this rapidly expanding frontier of the new science
