Why are 27% of drinks bought on aeroplanes tomato juice? How are chefs and companies planning to transform our dining experiences and what can we learn from their cutting edge insights to make memorable meals at home? These are just some of the ingredients of Gastrophysics in which the pioneering Oxford professor Charles Spence shows how our senses link up in the most extraordinary ways. He reveals the importance of all the off the plate elements of a meal the weight of cutlery the colour of the plate his lab showed that we perceive salty popcorn as tasting sweet when served in a red bowl the background music and much more. Whether dining alone or at a dinner party on a plane or in front of the TV he reveals how to understand what we taste and influence what others experience. Freakonomics for food meal times will genuinely never be the same again. Popular science at its best Daniel J. and the potential benefits this knowledge might have in addressing concerns for neurological cognitive and emotional health The authors begin with a survey of the fundamental scientific developments that led to our current understanding of the regenerative mind elucidating some of the breakthrough neurobiological studies that paved the way for our present understanding of the brain s plasticity and regenerative capabilities They then discuss the application of these findings to such issues as depression dyslexia schizophrenia and cognitive therapy incorporating the latest technologies in neuroimaging optogenetics and nanotechnology Their work shows the brain is anything but a static organ ceasing to grow as human beings become adults Rather the brain is dynamic evolving organically in relation to physical cultural historical and affective stimuli a plasticity that provides great hope to survivors of trauma and degenerative disorders *Cook, Taste, Learn* Guy Crosby, 2019-12-10
