This book provides comprehensive and up to date information on the neuropsychiatric disturbances that may be experienced by patients with multiple sclerosis. The first section is designed primarily to describe the general clinical aspects of multiple sclerosis from epidemiology to assessment tools. The role of neuroimaging and especially MRI is then explained and treatment approaches and rehabilitation strategies are described. The core section of the volume is the second in which the various forms of neuropsychiatric dysfunction are considered in depth. Especially detailed attention is devoted to depression but the other main categories of disturbance are also described and discussed. The final section addresses cognitive dysfunctions since they represent some of the worst events that patients with multiple sclerosis can suffer and are intimately related to neuropsychiatric dysfunction.
