Wi-Fi Integration to the 4G Mobile Network André Pérez, 2018-05-08 The adoption of smartphones has had as a corollary the use of services that require streaming such as video streaming which is a constraint for the 4G mobile network The integration of the network of Wi Fi hotspots deployed by the operators adds capacity to the 4G mobile network The use of Wi Fi technology in carrier networks is the result of developments coordinated by the IEEE WFA and WBA standardization bodies For its part the 3GPP standardization body has been working to integrate Wi Fi technology into the 4G mobile network The first part of this book presents the characteristics of the Wi Fi radio interface The different IEEE 802 11b g n ac physical layers characterize the implementation in the 2 4 GHz ISM frequency bands and U NII at 5 GHz The MAC layer defines a number of media access

procedures such as scanning associating or transferring data The second part of this book deals with the architecture of the 4G network based on the Wi Fi interface This architecture defines several models corresponding on the one hand to Wi Fi access controlled or not On the other hand to a handover controlled by the network or by the mobile The integration of Wi Fi technology resulted in a redefinition of attachment and session set up procedures Smartphones have the ability to activate simultaneously the two radio interfaces LTE and Wi Fi which allows to direct certain services to one and or the other of the interfaces The ANDSF and HotSpot 2 0 functions provide the mobile with rules for network selection and traffic control to determine which traffic is to be routed to what type of interface
