REAL TIME IMAGE PROCESSING FOR MEDICAL INFRARED IMAGING. ,2005 This thesis focuses on Medical Infrared Imaging It deals with the implementation of an infrared imaging system that can be used as a thermograph A user interface program is also signed in order to control the imaging system The system is implemented using Very High Speed Integrated Circuit Description Language VHDL Digitizing the data is implemented by Field Programmable Gate Array Non uniformities at the detector data are corrected by the two point correction algorithm To obtain absolute temperature readings another system calibration process is also performed Real time histogram equalization algorithm and a realtime convolution operation are implemented using the VHDL Tests of these implementations are performed by comparing the results with the numerical values A user interface program is developed to allow the operator select any filter type and measure the temperature of any point in the object Previous studies showed that an infrared system should detect a temperature difference of 500 mK if it is to be used for biomedical applications Using a black body system with a precise temperature control it is shown that this specification is satisfied Clinical evaluations for a few patients reveal that the implemented medical infrared system can be used for biomedical applications
