The Myths of Modern Medicine John Leifer, 2014-09-11 The American health care system is terminally ill It is astonishingly expensive remarkably variable in quality and incapable of stemming the rising tide of chronic illness in our population Yet the majority of Americans believe it is the best system in the world and cling to the belief that far from ailing it delivers care superior to those of countries across the globe The system has obliged us by providing an elaborate set of myths and misconceptions about American health care that significantly shape our beliefs These myths keep us blissfully ignorant about the true quality safety and value of the care we receive This ignorance has a price it leads us to draw erroneous conclusions about our conditions fail to properly evaluate potential treatment options and rarely question our providers competency The Myths of Modern Medicine looks at the real issues contributing to the dysfunction of our healthcare system and how these issues affect the care we receive The book based upon John Leifer s 30 years of immersion in the healthcare industry challenges some of our most commonly held misperceptions about this vitally important industry Leifer strips away the elaborately constructed myths that conceal the ugly underbelly of healthcare and lays bare the truth about an industry that serves special interest groups far better than it serves its patients A survival guide for anyone entering the healthcare system this timely work helps consumers better research provider competency ask the right questions to evaluate potential treatment options and communicate the information that will help yield the right treatment decisions Several studies have shown patients today have only about a 50 percent chance of getting the generally accepted best treatment for their conditions This book helps consumers increase these odds with step by step directions on how to interact more productively with their doctors and become true partners in making what may be the most crucial decisions of their lives

**Less Medicine, More Health** Dr. H. Gilbert Welch, 2016-03-01 A nationally recognized expert describes seven widespread assumptions that encourage excessive ineffective and sometimes harmful medical care for readers of Overdiagnosed and Malcolm Gladwell You might think the biggest problem in medical care is that it costs too much Or that health insurance is too expensive too uneven too complicated and gives you too many forms to fill out But the central problem is that too much medical care has too little value Dr H Gilbert Welch is worried about too much medical care He doesn't deny that some people get too little medical care rather that the conventional concern about too little needs to be balanced with a concern about too much too many people being made to worry about diseases they don't have and are at only average risk to get too many people being tested and exposed to the harmful effects of the testing process too many people being subjected to treatments they don't need or can't benefit from The American public has been sold the idea that seeking medical care is one of the most important steps to maintain wellness Surprisingly medical care is not in fact well correlated with good health More medicine does not equal more health in reality the opposite may be true In Less Medicine More Health Dr Welch pushes against established wisdom and suggests that medical care can be too aggressive Drawing on his twenty five years of medical practice and research he notes that while economics and lawyers contribute to the excesses of American medicine the problem is essentially created when the general public clings to these powerful assumptions about the value of tests and treatments a number of which are just plain wrong By telling fascinating and occasionally amusing stories backed by reliable data Dr Welch challenges patients and the health care establishment to rethink some very fundamental practices His provocative prescriptions hold the potential to save money and more important improve health outcomes for us all
