Megaprojects And Risk An Anatomy Of Ambition:

Megaprojects and Risk Bent Flyvbjerg, Nils Bruzelius, Werner Rothengatter, 2003-02-13 Megaprojects and Risk provides the first detailed examination of the phenomenon of megaprojects. It is a fascinating account of how the promoters of multi-billion dollar megaprojects systematically and self-servingly misinform parliaments, the public and the media in order to get projects approved and built. It shows in unusual depth how the formula for approval is an unhealthy cocktail of underestimated costs, overestimated revenues, undervalued environmental impacts and overvalued economic development effects. This results in projects that are extremely risky but where the risk is concealed from MPs, taxpayers and investors. The authors not only explore the problems but also suggest practical solutions drawing on theory, experience and hard scientific evidence from the several hundred projects in twenty nations and five continents that illustrate the book. Accessibly written, it will be the standard reference for students, scholars, planners, economists, auditors, politicians and interested citizens for many years to come.

Encyclopedia of Power Keith Dowding, 2011-02 Collects 381 entries that discuss political science, international relations and sociology.

Ethics and Planning Research Francesco Lo Piccolo, Huw Thomas, 2009 The consideration of ethics in social research has gained increasing prominence in the past few years, particularly research which seeks to inform public policy. This book presents an examination of issues relating to research ethics in planning for an international audience.

Komplexe neue Welt und wie wir lernen, damit klarzukommen Marco Wehr, 2024-04-11 Warum ist in unserer Welt alles so kompliziert geworden? Marco Wehr analysiert, wo Komplexität in der Natur der Sache liegt und an welchen Stellen die Menschheit sich auch selbstverschuldet ins Chaos manövriert. Und er zeigt Wege auf, wie man am besten damit umgeht. Das weltumspannende Internet, globale Lieferketten und eine empfindliche Energieinfrastruktur sind nicht nur die Grundlage von Wohlstand, sie machen die Zivilisation auch verletzlich. Schon die nur sechs Tage dauernde Havarie der Ever Given im Suezkanal brachte die Weltwirtschaft zum Stottern. Und im globalen Kommunikationsraum interagierende Algorithmen können ein unberechenbares Eigenleben entwickeln. Geschehen etwa bei einem der größten Brückencrashes des letzten Jahrhunderts: dem Black Monday am 19. Oktober 1987. Aber auch den Fall, dass unvermeidbare Naturkatastrophen die lebensnotwendige und empfindliche Infrastruktur schädigen sollten, wir bedenken: Was passiert, wenn durch ein Erdbeben das unterirdische Schlammlawinen auslöst empfindliche Datenkabel des Internets zerstört werden? Und sind wir auf den Ausbruch eines Supervulkans vorbereitet? Werden Solarmodule und Windkraft der dann noch genug Energie liefern und die Ernten reichen, um die Menschen zu ernähren? Marco Wehr durchdenkt diese Prozesse grundlegend, entwirrt die verwickelten Knoten des Komplexen und zeigt uns an, welchen Fäden wir ziehen müssen, um zu einem sichereren und zufriedeneren Leben zurückzufinden. Ein langstberfligtes, augenöffnendes Buch über die Dynamiken und die versteckten Gefahren einer hochkomplexen, technisierten Welt und ein Appell, darin das menschliche Maß nicht zu verlieren.

The Governance of Energy Megaprojects Benjamin K. Sovacool,C. J. Cooper,2013-07-01 Benjamin Sovacool and Christopher Jon Cooper have produced an astonishing and well written book based on extensive original research in twelve countries They explore the technical social political and economic dimensions of four energy megaprojects The large scale of megaprojects always appears to complicate the decision making process and often causes failures Megaprojects may even reinforce corruption and erode democracy It highlights that today s experiences can be explained by statements by Aristotle and Einstein who argue both in their own way that is always wise to take the limits of size into account and to reduce the size of projects wherever this is possible For everybody involved in megaprojects this book must be read Hugo Priemus Delft University of Technology The Netherlands Based on extensive original research this book explores the technical social political and economic dimensions of four Asian energy megaprojects a regional natural gas pipeline network in Southeast Asia a series of hydroelectric dams on the island of Borneo an oil pipeline linking Europe with the Caspian Sea and a very large solar energy array in the Gobi desert This book investigates why energy megaprojects fail to deliver their promised benefits It offers the first comprehensive assessment of the complicated dynamics driving and constraining megaprojects initiated in the rapid scramble for energy resources and efforts to improve energy security The authors approach the assessment of megaprojects from a socio technical angle emphasizing broad issues of political leadership regulation financing interest group opposition and environmental impact as well as conventional technological factors such as engineering design and project management The Governance of Energy Megaprojects will prove insightful for academics concerned about energy policy energy security environmental impact and technology assessment But the book should prove equally compelling to those engaged in the practical management and implementation of large scale energy projects anywhere in the world

Franca Cantoni, Edoardo Favari, 2022-07-08 Megaprojects also referred to in the literature as Large Engineering Projects or Major Projects are generally defined as large scale investment initiatives worth 1b or more and facing similar problems independent of the country where they are implemented and the industry they belong to The common feature of most megaprojects is that they are difficult to design and manage so that their realization and completion is always extremely expensive often over budget and delivery deadlines also are not met In the worst case scenario they remain unfinished This book through its multidisciplinary approach offers food for thought and alternative interpretations for the complex world of megaprojects While much research has been conducted and differing approaches have been developed over the last 20 years

there is still a lot of debate surrounding the topic and a holistic approach for effectively managing these initiatives is still missing. What is clear to all researchers and experts in the field is that a traditional linear management approach is simply not sufficient as at many stages of a megaproject iterative and feedback effect occurs due to stakeholder involvement and increasing and continuous interaction between them. The book promotes the debate among all categories of stakeholders involved in the megaproject's supply chain in order to increase the awareness of complex phenomena relating to the critical issues and common problems they face all over the world and to seek performance improvement across the whole life cycle of a megaproject including the selection design construction operation and de commissioning. The multidisciplinary approach cultivated in the book conveys an innovative way to study megaprojects and their inherent complexities. **Advances in**

Complexity and Sustainability in Megaprojects Franca Cantoni, Laura Corazza, Ernesto De Nito, Primiano Di Nauta, Edoardo Favari, 2024-05-20 This book showcases the discussion about megaprojects carried out at the MeRIT Megaproject Research Interdisciplinary Team workshop 2023 the crisis discontinuity rising prices and supply chains disruption force radical reflection for those involved in megaprojects. It raises a modern day challenge the creation of value for stakeholders. Indeed the aim of the volume is to encourage readers to think more broadly articulately and less stringently than the mainstream claims. There is a need to design implement and manage megaprojects by abandoning the old paradigm that leveraged solely on time and cost. We need to move beyond that by going to explore the value generated the positive impact on people communities and territories. Economic social and environmental sustainability takes on a new and broader articulation issues of the circular economy applied to megaprojects are addressed and ample space is ensured for the inclusion of social needs in current practices. **Socioeconomic Evaluation of Megaprojects** Markku

Lehtonen, Pierre-Benoît Joly, Luis Aparicio, 2016-11-22 The governance and evaluation of megaprojects that is large scale complex high stakes infrastructure projects usually commissioned by governments and delivered through partnerships between public and private organisations is receiving increased attention. However megaproject evaluation has hitherto largely adopted a linear rationalist perspective to explain the frequent failure of such projects to meet the iron triangle of performance criteria delivering on time within budget and according to specifications. This approach recommends greater control and accountability to remedy megaproject pathologies. Drawing on empirical examples mainly from the transport sector and radioactive waste disposal this book offers new perspectives to megaproject evaluation. Comprising contributions from leading experts in project evaluation and appraisal this collection opens up new avenues by suggesting two ways of

improving megaproject evaluation 1 approaches that go beyond the dominant linear rationalist notion of policy processes and emphasise instead the objective of opening up appraisal processes in order to enhance learning and reflexivity and 2 approaches that extend evaluative criteria beyond the iron triangle to cover the various socioeconomic impacts and preconditions for project success This volume will be of great relevance to scholars and practitioners with an interest in megaprojects energy and climate policy radioactive waste management urban design and project planning and management
