THE NETHERLANDS IN THE GLOBAL FOOD SYSTEM Eline Chivot, Willem L. Auping, Sijbren de Jong, Hannes Rõõs, Michel Rademaker, 2016-11-22 This study addressed the question of future food challenges and how these may play out Part of the analysis focused on the question as to how we may enhance our understanding of the effects of climate change increased population growth and rising incomes worldwide on future food systems The worldwide food system is vulnerable to many influences The approach used in this study focused on the most significant possible influencers of drivers or the elements having the most effect on how drivers will develop This approach was employed due to our understanding that the system s complexity cannot be reduced to the drivers alone The applied research method however allows us to look at the different aspects while recognizing their interlinkages

Swarm Planning Rob Roggema, 2013-09-11 This book shows that the problem of climate adaptation which is described in social planning terms as wicked is at odds with the contemporary practice of spatial planning The author proposes a new adjusted framework which is more adaptable to unpredictable wicked dynamic and non linear processes The inspiration for this new method is the behaviour of swarms bees ants birds and fish are capable of self organization which enables the system to become less vulnerable to sudden environmental changes The framework proposed in Swarm Planning consists of these four elements Two levels of complexity the first being the whole system and the second its individual components Each of these has different attributes for adapting to change Five layers consisting of networks focal points unplanned space natural resources and emerging occupation patterns Each layer has its own spatial dynamic and each is connected to a spatial scale Non linear processes which emerge in different parts of the framework and include emerging patterns connectedness and tipping points among others Two planning processes the first from small to large works upward from the slowest changing elements to more rapidly changing ones The second on the list of partners addresses each layer from networks through emerging occupation patterns Swarm Planning applies this framework to a series of pilot studies and appraises its performance using criteria for an adaptive landscape The results show that the use of the Swarm Planning Framework reduces the vulnerability of landscapes as well as the impact of climate hazards and disasters improves response to unexpected hazards and contains adaptation strategies This book is a must for planners in government and the private sector as it outlines the concept strategies and techniques for swarm planning It is also an important guide for policymakers looking to engage communities in a dialogue about the adaptation planning process Professor John Martin La Trobe University The ultimate value of the book lies in encouraging the planning community to consider options that go far beyond those offered by business as usual planning methodologies developed for a set of operating conditions that are fast becoming obsolete As such it makes an

important and much needed contribution to the field Assistant Professor Dr Chrisna du Plessis University of Pretoria [Zien](#)

Enhancing Teaching and Learning in the Dutch Vocational Education System Elly de Bruijn,Stephen Billett,Jeroen Onstenk,2017-02-23 This book discusses how the Dutch vocational education system has undergone significant waves of reform driven by global imperatives national concerns and governmental policy goals Like elsewhere the impetuses for these reforms are directed to generating a more industry responsive locally accountable and competence based vocational education system Each wave of reforms however has had particular emphases and directed to achieve particular policy outcomes Yet they are more than mere versions of what had or is occurring elsewhere They are shaped by specific national imperatives sentiments and localised concerns Consequently whilst this book elaborate what constitutes the contemporary provision of vocational education in the Netherlands also addresses a broader concern of how vocational education systems become formed manifested within nation states and then are transformed through particular imperatives institutional arrangement and localised factors So the readers of this book whilst learning much about the Dutch vocational education system will also come to identify and engage with a selection of contributions that inform factors that situate shape and transform vocational education systems Such a focus seems important given an era when there are concerns to standardise and make uniform educational provisions often for administrative or political imperatives As such this book will be of interest not only to those who are engaged in the field of vocational education but those with an interest in educational policy practice and comparative studies

Adaptation to Climate Change: A Spatial Challenge Rob Roggema,2010-03-12 As it becomes clear that climate change is not easily within the boundaries of the 1990 s society needs to be prepared and needs to anticipate future changes due to the uncertain changes in climate So far extensive

research has been carried out on several issues including the coastal defence or shifting ecozones. However the role spatial design and planning can play in adapting to climate change has not yet been focused on. This book illuminates the way adaptation to climate change is tackled in water management, ecology, coastal defence, the urban environment and energy. The question posed is how each sector can anticipate climate change by creating spatial designs and plans. The main message of this book is that spatial design and planning are a very useful tool in adapting to climate change. It offers an integral view on the issue, it is capable in dealing with uncertainties and it opens the way to creative and anticipative solutions. Dealing with adaptation to climate change requires a shift in mindset from a technical, rational way of thinking towards an integral, proactive one. A new era in spatial design and planning looms on the horizon.

Wiens Europa wint? Joop de Vries, 2009-10-31. Europa is in moeilijk vaarwater terechtgekomen door externe druk en interne verdeeldheid. Mede omdat een alomvattend plan ontbreekt, neemt Europa kleine stappen. De resulterende koers is afhankelijk van de machtsverhoudingen binnen de samenleving. Ze weerspiegelt het wezen en de waarden van de Europese burgers. In dit boek segmenteert Joop de Vries Europeanen niet op grond van hun nationaliteit maar op grond van hun normen en waarden. Hij baseert zich op empirisch onderzoek en definieert drie met elkaar concurrerende stromingen: Doorzetters, Lotgenoten en Voortrekkers. Dit panorama van de Europese samenleving laat De Vries overgaan in drie scenario's die elk een mogelijke toekomst beschrijven: Free is Fair, Shared Destiny en Metamorphosis. De doelstellingen en verwachtingen lopen ver uiteen, dus de centrale vraag is: Wiens Europa wint? De gepresenteerde stromingen en scenario's zijn instrumenten die de diversiteit zichtbaar maken en de lezer uitnodigen zijn positie te bepalen. De opzet van het boek is niet om aan te tonen wie gelijk heeft in het debat over de toekomst. Waar waardepatronen in het geding zijn, zijn zijn compromis en consensus geen optie. De diversiteit binnen onze samenleving zal verder toenemen en de uitdaging is om die onder ogen te zien en er effectief mee te kunnen omgaan. Joop de Vries heeft vele jaren bij Shell gewerkt waar hij onder meer hoofd was van de afdeling die in Londen de wereldscenario's ontwikkelt. Na zijn vertrek werkte hij bij sociaal culturele onderzoeksinstituten in Parijs en Heidelberg, voornamelijk aan Futures projecten ten behoeve van ondernemingen. Verder heeft hij managementposities bekleed in research, trading en marketing.
