*Mega Spot the Difference: Rainforest* Camilla De La Bédoyère, 2016 Readers are asked to spot the difference between twenty pairs of photographs featuring rain forest animals in their natural habitats *Jungle* Patrick Roberts, 2021-07-01 A bold ambitious and truly wonderful history of the world Peter Wohlleben author of *The Hidden Life of Trees* A fascinating story and a crucial revision of the momentous importance of tropical forests to human history Lewis Dartnell author of *Origins* \_\_\_\_\_ *Jungle* tells the remarkable story of the world's tropical forests from the arrival of the first plants millions of years ago to the role of tropical forests in the evolution of the world's atmosphere the dinosaurs the first mammals and even our own species and ancestors Highlighting provocative new evidence garnered from cutting edge research Dr Roberts shows for example that our view of humans as savannah specialists is wildly wrong and that the Anthropocene began not with the Industrial Revolution but potentially as early as 6 000 years ago in the tropics We see that the relationship between humankind and jungles is deep rooted that we are all connected to their destruction and that we must all act to save them Urgent clear sighted and original *Jungle* challenges the way we think about the world and ourselves \_\_\_\_\_ Welcome to the *Jungle* a breathtaking book Mark Maslin author of *How to Save Our Planet* Timely readable and highly relevant Steve Brusatte author of *The Rise and Fall of the Dinosaurs* Its revelations and stories will stir rearrange and populate your mind for years to come Paul Hawken editor of *Drawdown* Brilliant it delivers a timely warning about our abuse of the environment David Abulafia author of *The Great Sea* Finally a book on rainforests that does justice to their majesty and importance Simon Lewis co author of *The Human Planet* *Corridors to Extinction and the Australian Megafauna* Steve Webb, 2013-02-27 Extinctions have always occurred and always will so what is so surprising about the megafauna extinctions They were caused by humans and were the first of many extinctions that eventually led to the extinction of the Moa Steller's Sea Cow the Dodo Great Auk and countless other species great and small all attributed to human agency Therefore the megafauna were humans first great impact on the planet There is now an increasing realization that the blitzkrieg view of these extinctions may have been wrong A growing body of evidence and long term field work is beginning to show that at least Australia's megafauna did not succumb to human agency not because humans probably did not hunt the odd animal but because the an infinitely more logical reason lies in the climatic conditions of the Quaternary Ice Ages and the affect they had on continental geography environment climate and most importantly the biogeography of the megafauna This book presents the evidence of this theory demonstrating the biogeographic approach to Australia's megafauna extinction Written clearly to benefit a diverse level of readers from those with a passing interest to professionals in the field Examines future climate change and its effects on the planet by looking at examples buried in the past Presents new evidence from extensive field research **Rainforest Animals** Margaret Ann Switzer, 1991 This book deals with vertebrates found only in the wet tropics world heritage area of north eastern Australia Sixty species of endemic mammals

dominant vegetation type of the entire continent the Australian rainforests have shrunk over many millions of years to their present limited size However the forests and their history continue to hold valuable lessons for biogeographers and environmentalists This book gives a general account of the Australian rainforests their composition and location and how their present distribution has evolved The author s aim is to provide a broad biogeographical framework that will enable new information to be considered in a global perspective The book concludes with a historical account of human interaction with the rainforest from late Pleistocene times to the 1980s Biogeographers botanists and ecologists at all levels will find this to be a rich source of information and an inspiration for continuing efforts to conserve existing rainforests around the world

Coding Properties in Invertebrate Sensory Systems Sylvia Anton, Anders Garm, Berthold G. Hedwig, 2017-03-07 Animals rely on sensory input from their environment for survival and reproduction Depending on the importance of a signal for a given species accuracy of sensory coding might vary from pure detection up to precise coding of intensity quality and temporal features of the signal Highly sophisticated sense organs and related central nervous sensory pathways can be of utmost importance for animals in a complex environment and when using advanced communication systems In sensory systems different anatomical and physiological features have evolved to optimally encode behaviourally relevant signals at the level of sense organs and central processing The wide range of organizational complexity in combination with their relatively simple and accessible nervous systems makes invertebrates excellent models to study general sensory coding principles The contributions to this e book illustrate on one hand particular features of specific sensory systems and on the other hand indicate not only common features of sensory coding across invertebrate phyla but also similar processing principles of complex stimuli between different sensory modalities The chapters show that the extraction of behaviourally relevant signals from all environmental stimuli as well as the detection of low intensity signals and the analysis of temporal features can be similar across sensory modalities including olfaction vision mechanoreception and heat perception
