The Connected Home: The Future of Domestic Life Richard Harper, 2012-01-11 The title of this new book The Connected Home reflects the move away from the idea that smart homes would alter the lives of those living in them by providing technologies to take over tasks that were previously the responsibility of the householder such as managing entertainment education and even eating Up until around 10 years ago this view was commonplace but time has shown that the technologies to support a smart home have not developed in such a way as to support this premise Instead what people do in their homes has moved the concept of a smart home into that of the connected home The rise of on line games technologies video connections via Skype social networking internet browsing etc are now an integral part of the home environment and have had a significant effect on the home The contributors to this exciting new book consider and discuss the effects and ramifications of the connected home from a variety of viewpoints an examination of the take up of personal computers and the Internet in domestic situations an analysis of the changing intersection of technology and human habits in the connected home the impact of gaming texting e book readers tablets and other devices and their effect on the social conditions of a household the relationship between digital messaging applications and real geography and an overview of how sensing technologies for the smart home might evolve lightweight medical technologies for example The book culminates by addressing unfinished ambitions from the smart home agenda the factors that have prevented their realisation and addresses the need for extending research into the area

Quantitative Logic and Soft Computing Bing-Yuan Cao, Shuili Chen, Guojun Wang, Sicong Guo, 2010-10-14

Admittedly the notion intelligence or intelligent computing has been around us for several decades implicitly indicating any non conventional methods of solving complex system problems such as expert systems and intelligent control techniques that mimic human skill and replace human operators for automation Various kinds of intelligent methods have been suggested phenomenological or ontological and we have been witnessing quite successful applications On the other hand Soft Computing Techniques is the concept coined by Lot Zadeh referring to a set of approaches of computing which parallels the remarkable ability of the human mind to reason and learn in an environment of uncertainty imprecision and partial truth Such a notion is well contrasted with the conventional binary logic based hard computing and has been effectively utilized with the guiding principle of exploiting the tolerance for uncertainty imprecision and partial truth to achieve tractability bustness and low solution cost The soft computing techniques are often employed as the technical entities in a tool box with tools being FL ANN Rough Set GA etc Based on one's intuition and experience an engineer can build and realize hum like systems by smartly mixing proper technical tools effectively and efficiently in a wide range of fields For some time the soft computing techniques are also referred to as intelligent computing tools
