IN DEEP LEARNING Dr. Shashi, Rashi Rastogi, Renato Racelis Maaliw III, Dr. Ashok Kumar, 2023-04-24 Deep learning is a subfield of computer science that is currently focusing the majority of its attention on the areas of video picture text and speech recognition in addition to autonomous driving robotics healthcare and other areas This is in addition to other areas such as robotics and healthcare Academics and academicians are currently showing a significant amount of interest in the field of deep learning This is because it is a subfield of study that focuses a significant emphasis on achieving outcomes which explains why this is the case Rina Dechter was the first person to use the phrase deep learning in 1986 and the building of an intelligent computer that could emulate the functioning of the human brain was the driving force behind the expansion of this field of study The term deep learning was coined by Rina Dechter who was also the first person to use the term The human brain which is in charge of decision making is the most important organ in the body In order for the brain to arrive at its conclusions it takes in data through its five senses sight smell touch and hearing Memory is another item that is stored in the brain and it is this memory that may be used to solve complicated problems by drawing on experiences that have been gained in the past Throughout the course of the past few decades scientists have kept alive the dream that they may one day be able to design a computer with intellect comparable to that of our own brains In order to make progress towards achieving this goal they have initiated research into the fundamental make up and operation of the human brain One of the primary motivations behind the development of autonomous vehicles as well as robots that are capable of performing a variety of functions is the reduction in the number of collisions that take place along roadways This can be accomplished through the use of robots that are multi functional Because it is estimated by the World Health Organization WHO that 1 35 million people lose their lives on the roads of the world each year and since it is estimated that more than 90 percent of those deaths are the result of human errors that could have been avoided **Open AI and Computational Intelligence for**

Society 5.0 Pandey, Rajiv, Srivastava, Nidhi, Prasad, Rajesh, Prasad, Jayashree, Garcia, Manuel B., 2024-11-29 As technology

rapidly advances the complexity of societal challenges grows necessitating intelligent solutions that can adapt and evolve. However, developing such solutions requires a deep understanding of computational intelligence (CI) and its application in addressing real-world problems. Moreover, ethical considerations surrounding AI, such as bias and accountability, are crucial to ensure responsible development and deployment of intelligent systems.

Open AI and Computational Intelligence for Society 5.0 offers a comprehensive exploration of CI, providing insights into intelligent systems theory, design, and application. This book is a practical guide for scientists, engineers, and researchers seeking to develop thoughtful solutions for complex societal issues. Integrating disruptive technologies and frameworks illuminates the path toward creating intelligent machines collaborating with humans to enhance problem-solving and improve quality of life.

Four Battlegrounds Paul Scharre, 2023-02-28. An NPR 2023 Books We Love Pick. One of the Next Big Idea Club's Must-Read Books. An invaluable primer to arguably the most important driver of change for our future. P. W. Singer, author of *Burn In*, an award-winning defense expert, tells the story of today's great power rivalry: the struggle to control artificial intelligence. A new industrial revolution has begun. Like mechanization or electricity before it, artificial intelligence will touch every aspect of our lives and cause profound disruptions in the balance of global power, especially among the AI superpowers: China, the United States, and Europe. Autonomous weapons expert Paul Scharre takes readers inside the fierce competition to develop and implement this game-changing technology and dominate the future. *Four Battlegrounds* argues that four key elements define this struggle: data, computing power, talent, and institutions. Data is a vital resource like coal or oil, but it must be collected and refined. Advanced computer chips are the essence of computing power; control over chip supply chains grants leverage over rivals. Talent is about people, which country attracts the best researchers and most advanced technology companies. The fourth battlefield is, maybe, the most critical: the ultimate global leader in AI will have institutions that effectively incorporate AI into their economy, society, and especially their military. Scharre's account surges with futuristic technology. He explores the ways AI systems are already discovering new strategies via millions of war game simulations, developing combat tactics better than any human, tracking billions of people using biometrics, and subtly controlling information with secret algorithms. He visits China's National Team of leading AI companies to show the chilling synergy between China's government, private sector, and surveillance state. He interviews Pentagon leadership and tours U.S. Defense Department offices in Silicon Valley, revealing deep tensions between the military and tech giants who control data, chips, and talent. Yet he concludes that those tensions inherent to our democratic system create resilience and resistance to autocracy in the face of overwhelmingly powerful technology. Engaging and direct, *Four Battlegrounds* offers a vivid picture of how AI is transforming warfare, global security, and the future of human freedom, and what it will take for democracies to remain at the forefront of the world order.

Culey, 2018-11-06 We live in disruptive times The world is changing faster than ever before leaving people dazed businesses struggling economies floundering and societies fracturing But why Transition Point is the result of over five years of research to establish the answer a breathtaking tale of freedom unintended consequences and disruptive technologies that starts 1000 years ago and ends up in the second half of the 21st Century Starting with an examination into the drivers of technological change and the social economic and political factors that both enable or suppress it Transition Point explains why industrialisation happened where and when it did why progress comes in waves and why the technologies in the current wave such as robotics blockchain and AI are likely to be the most disruptive of all It then addresses the million dollar question what's next What impact will this wave have on our businesses our economies and most importantly on our society Culey explores how our current trajectory could result in a new golden age but also how it is just as likely to result in a digital dictatorship of compliance and constant surveillance Finally he explains why we may soon see Homo sapiens role as the dominant species come to an end As Klaus Schwab founder of the World Economic Forum stated We stand on the brink of a technological revolution that will fundamentally alter the way we live work and relate to one another In its scale scope and complexity the transformation will be unlike anything humankind has experienced before Transition Point explains why this is happening what it means and why the decisions we make now will prove to be critical *Gamification of Life and the*

Artificial Intelligence & Games Georgi Togeli, 2024-09-03 As has been pointed out by several industrial game AI developers the lack of behavioral modularity across games and in game tasks is detrimental for the development of high quality AI 605 171 An increasingly popular method for ad hoc behavior authoring that eliminates the modularity limitations of FSMs and BTs is the utility based AI approach which can be used for the design of control and decision making systems in games 425 557 Following this approach instances in the game get assigned a particular utility function that gives a value for

the importance of the particular instance 10 169 For instance the importance of an enemy being present at a particular distance or the importance of an agent's health being low in this particular context Given the set of all utilities available to an agent and all the options it has utility based AI decides which is the most important option it should consider at this moment 426 The utility based approach is grounded in the utility theory of economics and is based on utility function design The approach is similar to the design of membership functions in a fuzzy set A utility can measure anything from observable objective data e.g. enemy health to subjective notions such as emotions mood and threat The various utilities about possible actions or decisions can be aggregated into linear or non linear formulas and guide the agent to take decisions based on the aggregated utility The utility values can be checked every n frames of the game So while FSMs and BTs would examine one decision at a time utility based AI architectures
