Artificial Intelligence and Universal Values Jay Friedenber,2024-07-14 The field of value alignment or more broadly machine ethics is becoming increasingly important as artificial intelligence developments accelerate By alignment we mean giving a generally intelligent software system the capability to act in ways that are beneficial or at least minimally harmful to humans There are a large number of techniques that are being experimented with but this work often fails to specify what values exactly we should be aligning When making a decision an agent is supposed to maximize the expected utility of its value function Classically this has been referred to as happiness but this is just one of many things that people value In order to resolve this issue we need to determine a set of human values that represent humanity's interests Although this problem might seem intractable research shows that people of various cultures and religions actually share more in common than they realize In this book we review world religions moral philosophy and evolutionary psychology to elucidate a common set of shared values We then show how these values can be used to address the alignment problem and conclude with problems and goals for future research The key audience for this book will be researchers in the field of ethics and artificial intelligence who are interested in or working on this problem These people will come from various professions and include philosophers computer programmers and psychologists as the problem itself is multi disciplinary

Building Embodied AI Systems: The Agents, the Architecture Principles, Challenges, and Application Domains Pethuru Raj,Alvaro Rocha,Simar Preet Singh,Pushan Kumar Dutta,B.

Sundaravadivazhagan,2025-01-18 This book is primed to demystify the emerging and evolving trend of embodied systems It explains how these unique systems facilitate establishing smarter environments such as multi specialty hospitals

manufacturing floors warehouses retail stores defense zones eating joints entertainment plazas etc in detail for the benefit of our esteemed readers To get a complete and actionable understanding of any mission critical environment we must deploy embodied systems These systems such as robots drones etc are physical entities that are embedded and empowered with software systems They interact with the environment in real time providing context aware services There are chapters exclusively delineating the technologies behind the realization and deployment of such enigmatic systems The prominent industrial use cases are explained in the latter chapters

Cultural Robotics: Social Robots and Their Emergent Cultural Ecologies Belinda J. Dunstan, Jeffrey T. K. V. Koh, Deborah Turnbull, Tillman, Scott Andrew Brown, 2023-05-11 This edited collection approaches the field of social robotics from the perspective of a cultural ecology fostering a deeper examination of the reach of robotic technology into the lived experience of diverse human populations as well as the impact of human cultures on the development and design of these social agents To address the broad topic of Cultural Robotics the book is sectioned into three focus areas: Human Futures, Assistive Technologies, and Creative Platforms and their Communities The Human Futures section includes chapters on the histories and future of social robot morphology, design, sensory and sonic interaction with robots, technology, ethics, material explorations of embodiment and robotic performed sentience The Assistive Technologies section presents chapters from community-led teams and researchers working to adopt a strengths-based approach to designing assistive technologies for those with disability or neurodivergence Importantly, this section contains work written by authors belonging to those communities Creative Platforms and their Communities looks to

the creative cross disciplinary researchers adopting robotics within their art practices those contributing creatively to more traditional robotics research and the testing of robotics in non traditional platforms such as museum and gallery spaces Cultural Robotics Social Robots and their Emergent Cultural Ecologies makes a case for the development of social robotics to be increasingly informed by community led transdisciplinary research to be decentralised and democratised shaped by teams with a diversity of backgrounds informed by both experts and non experts and tested in both traditional and non traditional platforms In this way the field of cultural robotics as an ecological approach to encompassing the widest possible spectrum of human experience in the development of social robotics can be advanced **Microsoft Azure AI Fundamentals AI-900**
