Parallel Computation and Computers for Artificial Intelligence J.S. Kowalik, 2012-12-06 It has been widely recognized that artificial intelligence computations offer large potential for distributed and parallel processing Unfortunately not much is known about designing parallel AI algorithms and efficient easy to use parallel computer architectures for AI applications The field of parallel computation and computers for AI is in its infancy but some significant ideas have appeared and initial practical experience has become available The purpose of this book has been to collect in one volume contributions from several leading researchers and pioneers of AI that represent a sample of these ideas and experiences This sample does not include all schools of thought nor contributions from all leading researchers but it covers a relatively wide variety of views and topics and in this sense can be helpful in assessing the state of the art We hope that the book will serve at least as a pointer to more specialized literature and that it will stimulate interest in the area of parallel AI processing It has been a great pleasure and a privilege to cooperate with all contributors to this volume They have my warmest thanks and gratitude Mrs Birgitta Knapp has assisted me in the editorial task and demonstrated a great deal of skill and patience Janusz S Kowalik vii

Artificial Intelligence in Design '94 John S. Gero, Fay Sudweeks, 2012-12-06 Design is an important research topic in engineering and architecture since design is not only a means of change but also one of the keystones of economic competitiveness and the fundamental precursor to manufacturing However our

understanding of design as a process and our ability to model it are still very limited The development of computational models founded on the artificial intelligence paradigm has provided an impetus for much of current design research both computational and cognitive Notwithstanding their immaturity noticeable advances have been made both in extending our understanding of design and in developing tools based on that understanding The papers in this volume are from the Third International Conference on Artificial Intelligence in Design held in August 1994 in Lausanne Switzerland They represent the cutting edge of research and development in this field They are of particular interest to researchers developers and users of computer systems in design This volume demonstrates both the breadth and depth of artificial intelligence in design and points the way forward for our understanding of design as a process and for the development of computer based tools to aid designers

Drones - Various Applications Dragan Cvetković,2024-02-07 Although many believe that unmanned aerial vehicles or drones are a recent invention unmanned flight has a rich history that goes all the way back to ancient times The first systems that can be specified under the modern definition of unmanned aerial vehicles or drones include reconnaissance drones developed and deployed during the Cold War period Today such systems have evolved and can have different designs In the last twenty years many drones with different aerodynamic characteristics flight endurance methods and places of launch and acceptance and even more diverse purposes have been developed The achievements of modern science technique and technology especially in the field of microelectronics and control systems have made it possible to design and manufacture drones that are capable of performing controllable flight in a wide range of altitudes speeds and distances while performing complex and diverse tasks with almost the same efficiency as well as manned aircraft This book provides a comprehensive overview of drone technology and applications with chapters on the detection and classification of drones issues related to electric unmanned aerial vehicles integrating drones into educational curricula and the uses of different types of drones in various situations among other topics
