Priority-Zone Mapping for Reforestation Larissa Böhrkircher, Michael Leuchner, Fabio Bayro Kaiser, Christa Reicher, 2023-02-02 Andean dry forest ecosystems are threatened by deforestation and unsustainable land use methods. The negative effects for the livelihood of the local population, biodiversity, and the regional climate could be countered by reforestation measures; however, dry land forests have not attracted the same level of interest and investment like other ecosystems. This book describes the development of a priority zone map for reforestation measures, showing where reforestation might have the greatest social and ecological benefits. To achieve this, a problem analysis of a case study region is conducted, and thematic reforestation benefits are determined. Using remote sensing and GIS, the areas where benefits can be obtained are mapped in individual layers and compiled into a summarizing priority zone map. It is thus possible to identify areas where reforestation would achieve multiple benefits. The concept of priority maps could be used to facilitate reforestation strategies by local communities and municipal governments and could thus contribute to initiate an integrated forest and landscape restoration of the Bolivian montane dry forests.

A Practical Introduction to Human-in-the-Loop Cyber-Physical Systems David Nunes, Jorge Sa Silva, Fernando Boavida, 2018-02-05 The first book focusing on one of the hottest new topics in Internet of Things systems research and development. Studies estimate that by 2020 we will have a vast Internet of Things (IoT) network comprising 26 billion connected devices, including everything from light bulbs to refrigerators, coffee makers to cars. From the beginning, the concept of cyber physical systems (CPS) or the sensing and control of physical phenomena through networks of devices that work together to achieve common goals has been implicit in the IoT enterprise. This book focuses on the increasingly hot topic of Human in the loop Cyber Physical Systems (HiTLCPS). CPSs that incorporate human responses in IoT equation. Why have we not yet integrated the human component into CPSs? What are the major challenges to achieving HiTLCPS? How can we take advantage of ubiquitous sensing platforms such as smartphones and personal devices to achieve that goal? While mature HiTLCPS designs have yet to be achieved, or a general consensus reached on underlying HiTLCPS requirements, principles, and theory, researchers and developers worldwide are on the cusp of realizing them. With contributions from researchers at the cutting edge of HiTLCPS R D, this book addresses many of these questions from the
