New Natures Joining Environmental History With Science And Technology Studies:

New Natures Dolly Jørgensen, Finn Arne Jørgensen, Sara B. Pritchard, 2013-07-08 *New Natures* broadens the dialogue between the disciplines of science and technology studies STS and environmental history in hopes of deepening and even transforming understandings of human nature interactions The volume presents richly developed historical studies that explicitly engage with key STS theories offering models for how these theories can help crystallize central lessons from empirical histories facilitate comparative analysis and provide a language for complicated historical phenomena Overall the collection exemplifies the fruitfulness of cross disciplinary thinking The chapters follow three central themes ways of knowing or how knowledge is produced and how this mediates our understanding of the environment constructions of environmental expertise showing how expertise is evaluated according to categories categorization hierarchies and the power afforded to expertise and lastly an analysis of networks mobilities and boundaries demonstrating how knowledge is both diffused and constrained and what this means for humans and the environment Contributors explore these themes by discussing a wide array of topics including farming forestry indigenous land management ecological science pollution trade energy and outer space among others The epilogue by the eminent environmental historian Sverker Sorlin views the deep entanglements of humans and nature in contemporary urbanity and argues we should preserve this relationship in the future Additionally the volume looks to extend the valuable conversation between STS and environmental history to wider communities that include policy makers and other stakeholders as many of the issues raised can inform future courses of action

Methodological Challenges in Nature-Culture and Environmental History Research Jocelyn Thorpe, Stephanie Rutherford, L. Anders Sandberg, 2016-11-10 This book examines the challenges and possibilities of conducting cultural environmental history research today Disciplinary commitments certainly influence the questions scholars ask and the ways they seek out answers but some methodological challenges go beyond the boundaries of any one discipline The book examines how to account for the fact that humans are not the only actors in history yet dominate archival records how to attend to the non visual senses when traditional sources offer only a two dimensional non sensory version of the past how to decolonize research in and beyond the archives and how effectively to use sources and means of communication made available in the digital age This book will be a valuable resource for those interested in environmental history and politics sustainable development and historical geography

The Oxford Handbook of Environmental History Andrew C. Isenberg, 2017 *The Oxford Handbook of Environmental History* draws on a wealth of new scholarship to offer diverse perspectives on the state of the field

Die Geburt des Geoengineerings Martin Meiske, 2021-02-01 *ber die Beherrschbarkeit der Natur und bauliche Gro projekte als Lernorte des Menschen* Martin Meiske erz hlt die Geschichte von Hoffnungen und Scheitern Visionen zur Erdgestaltung sind weit lter als deren Umsetzung Doch erst seit den 1850er Jahren wurden im Rahmen von immer gr eren Bauprojekten jahrmillionenalte nat rliche Formationen durchstochn und

grundlegend umgeformt Hier schlägt die Geburtsstunde des Geoengineerings das seinen Ausdruck in spektakulären Eisenbahntunneln in Ozeane verbindenden Meeresskanalen und monumentalen Staudämmen findet In dieser Zeit beginnt sich der Mensch zu einem der wichtigsten Einflussfaktoren auf die biogeochemischen Stoffkreisläufe der Erde zu entwickeln und es kündigt sich eine neue geochronologische Epoche an das Anthropozän Die damit verbundenen Hoffnungen auf Beherrschbarkeit der Natur z.B. zwecks billiger Energiegewinnung erfüllten sich nicht immer Manches Infrastrukturprojekt endete tragisch Menschen und Ökosysteme in den betroffenen Regionen kämpften über Generationen hinweg mit den Folgen dieser Großbauten Vor diesem Hintergrund ist die heute zumindest teilweise zögerliche Haltung zu verstehen größere Eingriffe in die Erdsysteme etwa durch das Climate Engineering vorzunehmen Martin Meiske widmet sich anhand von Beispielen wie dem Mont Cenis Tunnel oder dem Panamakanal der Historisierung des Geoengineerings und rekonstruiert die damit verbundenen Voraussetzungen Auswirkungen und Wahrnehmungen *Umwelt - Technik - Wissen* Fabian

Zimmer, Sebastian De Pretto, Robert Groß, Eike-Christian Heine, Aske Hennelund Nielsen, Sarah Hijmans, Martin Meiske, Caterina Schürch, Karolin Wetjen, Christian Zumbärgel, 2025-11-07 Umwelt Technik und Wissen sind zentrale Triebfedern moderner Gesellschaften Die Beiträge innen machen die Verflechtungen dieser Bereiche vom 18. Jahrhundert bis heute sichtbar Dabei setzen sie Schwerpunkte auf das Spannungsverhältnis zwischen Ökonomie und Ökologie in Konzepten und Praktiken des Haushaltens auf kritische Infrastrukturen und vulnerable Umwelten auf widerstandsfähige Umwelten in Zeiten ihrer Quantifizierung sowie auf die Verwissenschaftlichung von Umwelten in der Agrargeschichte und bieten so einen aktuellen Einblick in die junge Forschung aus der Umweltgeschichte und angrenzenden Feldern im deutschsprachigen Raum

Debating Contemporary Approaches to the History of Science Lukas M. Verburgt, 2024-01-11 *Debating Contemporary Approaches to the History of Science* explores the main themes problems and challenges currently at the top of the discipline's methodological agenda In its chapters established and emerging scholars introduce and discuss new approaches to the history of science and revisit older perspectives which remain crucial Each chapter is followed by a critical commentary from another scholar in the field and the author's response The volume looks at such topics as the importance of the global digital environmental and posthumanist turns for the history of science and the possibilities for the field of moving beyond a focus on ideas and texts towards active engagement with materials and practices It also addresses important issues about the relationship between history of science on the one hand and philosophy of science history of knowledge and ignorance studies on the other With its innovative format this volume provides an up to date authoritative overview of the field and also explores how and why the history of science is practiced It is essential reading for students and scholars eager to keep a finger on the pulse of what is happening in the history of science today and to contribute to where it might go next

Planning for the Planet Simone Schleper, 2019-07-12 During the 1960s and 1970s rapidly growing environmental awareness and concern created unprecedented demand for ecological expertise and novel challenges for ecological advocacy

groups such as the International Union for Conservation of Nature and Natural Resources IUCN This book reveals how despite their vast scientific knowledge and their attempts to incorporate socially relevant themes IUCN experts inevitably struggled to make global schemes for nature conservation a central concern for UNESCO UNEP and other intergovernmental organizations *Environment and Infrastructure* Giacomo Bonan,Katia Occhi,2023-04-27 The material and energy flows that characterized the metabolism of preindustrial and industrial societies were organized through complex infrastructures based on interwoven social and natural elements Analyzing infrastructures from many methodological and thematic perspectives the present volume adopts an extensive periodization to identify the undeniable changes caused by industrialization and the persistence of pre existing features and dynamics The contributions range from the late Middle Ages to the 1990s and deepen historical characteristics of urban metabolism the study of energy systems and their transitions and the management and control of water resources These reveal the strategies societies and states adopted to transform and adapt their surrounding environment in a constant and challenging equilibrium of diverse interests whose impact over time has had environmental consequences on a global scale *Animals Count* Nancy Cushing,Jodi Frawley,2018-06-13 Whether their populations are perceived as too large just right too small or non existent animal numbers matter to the humans with whom they share environments Animals in the right numbers are accepted and even welcomed but when they are seen to deviate from the human declared set point they become either enemies upon whom to declare war or victims to be protected In this edited volume leading and emerging scholars investigate for the first time the ways in which the size of an animal population impacts how they are viewed by humans and conversely how human perceptions of populations impact animals This collection explores the fortunes of amphibians mammals insects and fish whose numbers have created concern in settler Australia and examines shifts in these populations between excess abundance equilibrium scarcity and extinction The book points to the importance of caution in future campaigns to manipulate animal populations and demonstrates how approaches from the humanities can be deployed to bring fresh perspectives to understandings of how to live alongside other animals

Smoke on the Water Dario Fazzi,2023-10-31 The U S government military and industry once saw ocean incineration as the safest and most efficient way to dispose of hazardous chemical waste Beginning in the late 1960s toxic chemicals such as PCBs and other harmful industrial byproducts were taken out to sea to be destroyed in specially designed ships equipped with high temperature combustion chambers and smokestacks But public outcry arose after the environmental and health risks of ocean incineration were exposed and the practice was banned in the early 1990s Smoke on the Water traces the rise and fall of ocean incineration showing how a transnational environmental movement tested the limits of U S political and economic power Dario Fazzi examines the anti ocean incineration movement that emerged on both sides of the Atlantic arguing that it succeeded by merging local advocacy with international mobilization He emphasizes the role played at the grassroots level by women migrant workers and other underrepresented groups who were at greatest risk Environmental

groups for their part gathered and shared evidence about the harms of at sea incineration building scientific consensus and influencing international debates Smoke on the Water tells the compelling story of a campaign against environmental degradation in which people from marginalized communities took on the might of the U S military industrial complex It offers new insights into the transnational dimensions of environmental regulation the significance of nonstate actors in international history and the making of environmental justice movements

Northscapes Dolly Jørgensen, Sverker Sörlin, 2013-11-08 This book argues that the unique environments of the North have been borne of the relationship between humans and nature Approaching the topic through the lens of environmental history the contributors examine a broad range of geographies including those of Iceland and other islands in the Northern Atlantic Sweden Finland Russia the Pacific Northwest and Canada over a time span ranging from CE 800 to 2000 Northscapes is bound together by the intellectual project of investigating the North both as an imagined and mythologized space and as an environment shaped by human technology The North offers a valuable analytical framework that surpasses nation states and transgresses political and historical borders This volume develops rich explorations of the entanglements of environmental and technological history in the northern regions of the globe

Spatializing the History of Ecology Raf de Bont, Jens Lachmund, 2017-06-26 This book advances a spatial perspective on the history of ecology Intrigued by broader debates in the humanities on the spatial turn the authors contribute to a more explicit and systematic development of spatial thinking in the history of ecology exploring to which extent a spatial perspective can shed new light on the history of ecological science and using ecology as a critical site to gain broader insights into the history of the environment in the nineteenth and twentieth centuries

Perspektiven auf Stoffgeschichte Sebastian Haumann, Eva-Maria Roelevink, Nora Thorade, Christian Zumbrägel, 2023-10-02 Seit gut einem Jahrzehnt ist ein wachsendes Interesse an der Geschichte einzelner Stoffe zu verzeichnen Es gibt Studien zu Kohle Salz oder Baumwolle aber auch zu komplexen Stoffprodukten wie Kunststoffen oder Kokain Das geschichtswissenschaftliche Interesse an Stoffen ist zwar keineswegs neu aber die Perspektiven haben sich in den letzten Jahren unter dem Eindruck einer neuen Debatte über Materialität erheblich gewandelt Die Beiträge in den aktuellen Debatten und arbeiten Umriss einer Stoffgeschichte heraus Sie liefern damit erstmals einen Einblick in Methoden und Praktiken des Forschungsfeldes und geben Perspektiven für die Zukunft

Environmentalism in Central and Southeastern Europe Hrvoje Petric, Ivana Žebec Šilj, 2017-03-17 Consisting of 12 chapters the book presents the rise and development of environmentalism environmental history as a discipline and the history of environmental movements in the Central and South Eastern European region from an international point of view The chapters written by scholars from Italy Austria Slovenia Croatia Slovakia Romania Serbia Greece and Turkey cover a wide range of topics including the creation of protected areas increasing environmental consciousness the evolution of humanity's relationship toward the environment and perceptions of environmentalism by different disciplines This international approach highlights the region's complex development from the end of the eighteenth

century through the twentieth century with its unique blend of traditions Three historically different traditions the Habsburg Ottoman and Venetian converge in Central and South Eastern Europe and this book emphasizes the subtleties of these sometimes intertwined traditions The focus of the book varies according to both the different geographical environments characteristic of the region and the protagonists who actively participated in changing relationships toward the environment However what does not vary and is common to all the chapters is the historical approach since the process has continuity which the book accentuates In geographical terms the region that is the focus of the book Central and South Eastern Europe is the contact zone of the Alps Danube Adriatic and partially the North Eastern Mediterranean Sea Throughout history it was also the contact zone of the Habsburg Ottoman and Venetian traditions Those realities have resulted in a unique blending and intertwining of traditions and therefore relationships with and perceptions of the environment

Climate Ghosts Nancy Langston, 2021-10-21 Langston focuses on three ghost species in the Great Lakes watershed woodland caribou common loons and lake sturgeon Their traces are still present in DNA small fragmented populations or in lone individuals We can still restore them if we make the hard choices necessary for them to survive

Beyond the Lab and the Field Eike-Christian Heine, Martin Meiske, 2022-04-19 Beyond the Lab and the Field analyzes infrastructures as intense sites of knowledge production in the Americas Europe and Asia since the late nineteenth century Moving beyond classical places known for yielding scientific knowledge chapters in this volume explore how the construction and maintenance of canals highways dams irrigation schemes the oil industry and logistic networks intersected with the creation of know how and expertise Referred to by the authors as scientific bonanzas such intersections reveal opportunities for great wealth but also distress and misfortune This volume explores how innovative technologies provided research opportunities for scientists and engineers as they relied on expertise to operate which resulted in enormous profits for some But like the history of any gold rush the history of infrastructure also reveals how technologies of modernity transformed nature disrupting communities and destroying the local environment Focusing not on the victory march of science and technology but on ambivalent change contributors consider the role of infrastructures for ecology geology archaeology soil science engineering ethnography heritage and polar exploration Together they also examine largely overlooked perspectives on modernity the reliance of infrastructure on knowledge and infrastructures as places and occasions that inspired a greater understanding of the natural world and the technologically made environment

Environing Media Adam Wickberg, Johan Gärdebo, 2022-08-22 This edited volume interrogates the role of media technologies in the formation of environments understood both as physical spaces and as epistemological constructs about them Using the concept of environing media the book advances a deeper understanding of how media processes defined here as the storage process and transmission of data influence human Earth relations Virtually all aspects of the interconnected global ecological crisis can be related to the intensification and acceleration of scaling up the human imprint on the planet by technological means Combining ideas from the humanities arts and humanistic social

sciences *Environing Media* offers a perspective on how we entered the current geological epoch the Anthropocene The ten chapters explore colonial planetary and elemental environing media with cases including indigenous history ocean monitoring computational history climate modeling environmental history the air as medium the biosphere and the Earth system Drawing upon a breadth of examples and expertise in history anthropology geography cultural history science and technology studies and media studies the book discovers a novel approach to human Earth histories that demonstrates how technologies have mediated between humans and environments and in the process contributed to a societal feedback loop between knowing and doing environment each impacting the other *Environing Media* is a timely addition for scholars and upper level students in environmental humanities and media studies The Open Access version of chapters 1 2 3 4 5 7 8 and 9 are available at <http://www.taylorfrancis.com/books/e/9781003282891> Chapters 1 2 4 5 and 7 have been made available under a Creative Commons Attribution Non Commercial No Derivatives 4.0 CC BY NC ND 4.0 license Chapters 3 8 and 9 have been made available under a Creative Commons Attribution CC BY 4.0 license

Deep Cut Christine Keiner, 2020-08 HISTORY Modern 20th Century SCIENCE History TECHNOLOGY ENGINEERING History **Poisonous Skies** Rachel Emma Rothschild, 2019-07-19 The climate change reckoning looms As scientists try to discern what the Earth's changing weather patterns mean for our future Rachel Rothschild seeks to understand the current scientific and political debates surrounding the environment through the history of another global environmental threat acid rain The identification of acid rain in the 1960s changed scientific and popular understanding of fossil fuel pollution's potential to cause regional and even global environmental harms It showed scientists that the problem of fossil fuel pollution was one that crossed borders it could travel across vast stretches of the earth's atmosphere to impact ecosystems around the world This unprecedented transnational reach prompted governments for the first time to confront the need to cooperate on pollution policies transforming environmental science and diplomacy Studies of acid rain and other pollutants brought about a reimagining of how to investigate the natural world as a complete entity and the responses of policy makers scientists and the public set the stage for how societies have approached other prominent environmental dangers on a global scale most notably climate change Grounded in archival research spanning eight countries and five languages as well as interviews with leading scientists from both government and industry *Poisonous Skies* is the first book to examine the history of acid rain in an international context By delving deep into our environmental past Rothschild hopes to inform its future showing us how much is at stake for the natural world as well as what we risk and have already risked by not acting Environment, Technology, and Development Ismay Milford, Corinna R. Unger, Iris Borowy, 2025-12-01 Histories of environment and histories of technology have moved in exciting interdisciplinary directions in recent years with increasing recognition that both environments and technologies are made and remade gaining meaning only in specific historical settings With historical scholarship weighted towards examples from the North Atlantic world this volume provides a collection of grounded case studies from across the modern world that

interrogate the relationship between environment and technology in developmental practices and discourses Development projects have often involved assumptions that humans can create and wield technology to harness improve or protect the non human environment This volume will not simply discredit these assumptions by revealing their nefarious effects on our society and planet but instead historicise them by locating them within specific power structures and epistemologies The connections and conversations between dispersed cases raised here point us to more nuanced conclusions about the causes and effects the objects and subjects of history in this dynamic interaction between environment technology and development
