Now full disclosure I m not a statistician I m not even a failed statistician I m a data information and knowledge architect Which let s face it sounds like someone who builds libraries for robots And in a way I do Except the robots are middle managers and the libraries are databases full of regrets and bad formatting But I respect statisticians I admire them They are the quiet librarians of

empirical truth toiling away with n values and confidence intervals while the rest of the world s busy building AI models that can t even tell the difference between a cat and a war crime And so I wrote this to say statisticians matter Analysts matter Truth matters And if they can t or won t say it themselves because they re too busy validating regressions or crying into their R scripts then I ll do it I ll defend them whether they like it or not It s my form of vigilante justice like Batman but with pivot tables Yes this book is multi modal and multi model No it won t give you all the answers But it will ask better questions than How do we maximise synergy in the Q4 vertical So here it is A book that tries against all odds against the tide of meaningless metrics and digital chicanery to make analytics useful accessible and just the tiniest bit decent Because in a world where the truth has to compete with corporate nonsense dressed as insight someone has to stick up for the bar charts that mean something Let s make analytics great again Or at least not completely unbearable Enjoy **Those Ten Essentials for**
