Fitzgerald,Lorraine Morgan,Xiaofeng Wang,2008-06-10 The XP conference series established in 2000 was the first conference dedicated to agile processes in software engineering The idea of the conference is to offer a unique setting for

advancing the state of the art in the research and practice of agile processes This year's conference was the ninth consecutive edition of this international event The conference has grown to be the largest conference on agile software development outside North America The XP conference enjoys being one of those conferences that truly brings practitioners and academics together About 70% of XP participants come from industry and the number of academics has grown steadily over the years XP is more of an experience rather than a regular conference It offers several different ways to interact and strives to create a truly collaborative environment where new ideas and exciting findings can be presented and shared For example this year's open space session which was a conference within a conference was larger than ever before Agile software development is a unique phenomenon from several perspectives

Construction and Evolution of Code Generators Sven Jörges,2013-01-12 Automatic code generation is an essential cornerstone of model driven approaches to software development Currently lots of techniques are available that support the specification and implementation of code generators such as engines based on templates or rule based transformations All those techniques have in common that code generators are either directly programmed or described by means of textual

specifications This monograph presents Genesys a general approach which advocates the graphical development of code generators for arbitrary source and target languages on the basis of models and services In particular it is designed to support incremental language development on arbitrary metalevels The use of models allows building code generators in a truly platform independent and domain specific way Furthermore models are amenable to formal verification methods such as model checking which increase the reliability and robustness of the code generators Services enable the reuse and integration of existing code generation frameworks and tools regardless of their complexity and at the same time manifest as easy to use building blocks which facilitate agile development through quick interchangeability Both models and services are reusable and thus form a growing repository for the fast creation and evolution of code generators
