

Book Review

Eszter Hargittai and Christian Sandvig (Eds.), "Digital Research Confidential: The Secrets of Studying Behavior Online." Cambridge, MA: The MIT Press, 2015, 271 pp.

doi: 10.2383/85296

This collection of essays edited by Eszter Hargittai and Christian Sandvig remains true to its title's promise to provide "confidential" insights into digital research. Browsing the pages of this volume feels like being allowed to look into a researcher's "secret (methodological) diary." As the authors of one chapter eloquently state, the essays are a "behind-the-scenes look at both the content and the practice of a challenging and chaotic interdisciplinary research adventure, with an emphasis on how [the researcher] solved or dealt with the various problems that came [his or her] way" (p. 175).

The book comprises eleven chapters: the first is a helpful introduction by the editors that does a great job of putting the various contributions in context, while the remaining ten chapters are accounts of research projects that include detailed first-person methodological analyses.

As the title suggests, this edited collection examines cutting-edge research both *with* and *about* digital media. Sandvig and Hargittai explain that the contributors conceptualize the Internet (and digital media in general) as both an "instrument" and an "object of study." The great enthusiasm surrounding the potential of "big data" for social research should be tempered by the concrete case studies presented in this book. There is indeed an unprecedented amount of online data available to researchers. Digital media can also make exciting research tools. However, scholars should be aware of both the different possible approaches to conducting research with online data, and the associated limitations. This volume informs the reader about these methods and their challenges, while presenting creative ways of using big data for social research. Individual chapters deal with different types of big data such as: web site interfaces [Chapter 2]; *YouTube* videos [Chapter 3]; *Wikipedia* entries and photos uploaded on *Flickr* [Chapter 8]; hyperlinks [Chapter 9]; and friendship networks in virtual worlds [Chapter 10]. Two chapters even propose new methods for collecting and analyzing online data: Gilbert and Karahalios describe a web application developed ad hoc to collect large amounts of data for their sociological research on tie strengths [Chapter 6], while Shaw tells us about using crowdsourced data collection and classification to perform extensive content analysis on hundreds of websites [Chapter 7].

The book, however, is not about big data *per se*, but about research *with* and *about* digital media. Therefore, the chapters illustrate the adoption of different digital research methods reflecting different research aims. These methods may be pioneering, but are not necessarily so. On the one hand, the book includes chapters describing established ethnographic research – such as boyd's study on teenagers' engagement with social media and Leonardi's organizational ethnography with engineers using visual digital data in a workplace setting. On the other hand, it outlines research projects that inevitably required innovative methods – such as Hect and Gergle's study on the local dimension of user-generated content (that is to say, the extent to which users edit and upload content about
