Building Resilience to Natural Disasters: An Application to Small Developing States

Ricardo Marto, Mr. Chris Papageorgiou, Mr. Vladimir Klyuev, 2017-10-30 We present a dynamic small open economy model to explore the macroeconomic impact of natural disasters In addition to permanent damages to public and private capital the disaster causes temporary losses of productivity inefficiencies during the reconstruction process and damages to the sovereign's creditworthiness We use the model to study the debt sustainability concerns that arise from the need to rebuild public infrastructure over the medium term and analyze the feasibility of ex ante policies such as building adaptation infrastructure and fiscal buffers and contrast these policies with the post disaster support provided by donors Investing in resilient infrastructure may prove useful in particular if it is viewed as complementary to standard infrastructure because it raises the marginal product of private capital crowding in private investment while helping withstand the impact of the natural disaster In an application to Vanuatu we find that donors should provide an additional 50% of pre cyclone GDP in grants to be spent
