Nogales, Rafael E. Jimenez, 2017-03-06 This book provides for the first time a detailed up to date holistic approach to the pathology and biology of germ cell tumors The main focus is the complex histopathology of these tumors but special considerations are also given to their morphologic variations in relation to age gender and organ Critical updates are provided on terminology and classification the discussion of biology and pathogenesis includes references to many molecular genetic and immunohistochemical findings from recent stem cell research Individual chapters are devoted to germ cell tumors at different anatomic locations including not only the ovaries and testes but also the mediastinum and central nervous system and pediatric tumors All of the contributing authors are opinion leaders from universities of excellence in Europe and the United States This monograph will be of wide interest to practitioners and researchers in many fields of medicine including pathology gynecology urology and pediatrics as well as stem cell scientists

Clinical Applications of Cytokines and Growth Factors John R. Wingard, George D. Demetri, 1999-05-31 The hematopoietic system plays roles that are crucial for survival of the host delivery of oxygen to tissues arrest of accidental blood leaking from blood vessels and fending off of invading microbes by humoral cell mediated and phagocytic immunity The activity of the hematopoietic system is staggering daily a normal adult produces approximately 2.5 billion erythrocytes 2.5 billion platelets and 1 billion granulocytes per kilogram of body weight This production is adjusted in a timely fashion to changes in actual needs and can vary from nearly none to many times the normal rate depending on needs which vary from day to day or even minute to minute In response to a variety of stimuli the cellular components of the blood are promptly increased or decreased in production to maintain appropriate numbers to optimally protect the host from hypoxia infection and hemorrhage How does this all happen and happen without over or under responding There has been extraordinary growth in our understanding of hematopoiesis over the last two decades Occupying center stage is the pluripotent stem cell and its progeny Hematopoietic stem cells have been characterized by their capacity for self renewal and their ability to proliferate and differentiate along multiple lineages Few in number the stem cell gives rise to all circulating neutrophils erythrocytes lymphoid cells and platelets In hematopoietic transplantation the stem cell is capable of restoring long term hematopoiesis in
