Image-based digital tools for diagnosis and surgical treatment: applications, challenges and prospects Laura Cercenelli, Adrian Elmi-Terander, Thomas Maal, Virginia Mamone, Francesca Manni, 2025-06-18 Image based digital tools include a range of technologies such as 3D modeling 3D printing Virtual Reality VR and Augmented Reality AR originating from a common data source i.e patient diagnostic imaging Also artificial intelligence AI is a rapidly increasing technology that can be applied to diagnostic imaging In recent years these tools have attracted great attention in the medical field to support preoperative planning intraoperative guidance diagnostics and therapeutics as well as for educational purposes Indeed interventional procedures and surgery applications are being developed to display virtual medical images and patient specific 3D virtual models that can be

manipulated before the intervention These virtual anatomical models can be used to build physical replicas and or to design patient specific surgical tools and therapeutic devices using advanced 3D printing technologies The virtual models can also be visually overlaid fused or integrated into reality using AR With AR visualization different types of virtual information can be projected in the surgeon s line of view facilitating navigation and decision making Also AI applied to diagnostic medical images is expected to produce significant innovations such as more efficient automatic image scan and processing and a more efficient examination and diagnosis workflow

Accelerated Systems for Portable DNA Sequencing Harisankar Sadasivan,2023-04-30 The MinION is a revolutionary handheld DNA sequencer that is inexpensive portable and can perform real time sequencing MinION is increasingly used in Precision Medicine applications However the MinION lacks portable compute power This thesis introduces two clinical applications of the MinION and identifies and solves performance bottlenecks through hardware and software solutions to enable portable microbial diagnostics Finally we discuss how our accelerated solutions will fit on a laptop with a GPU More than 99% of DNA fragments in a typical human sample are non target human which may be skipped in real time using the MinION s Read Until feature We analyze the performance of the Read Until pipeline in detecting target microbial species for targeted viral pathogen detection and microbiome abundance

estimation We find new sources of performance bottlenecks basecaller in the classification of a fragment that are not addressed by past genomics accelerators While SquiggleFilter and DTWax are our solutions for targeted viral pathogen detection RawMap is for untargeted microbiome analysis We also discuss accelerating the bottleneck step in the DNA mapping software Minimap2 used in all of MinION s sequencing workflows For targeted virus detection we discuss SquiggleFilter which is a portable and programmable hardware software solution that directly analyzes MinION s raw squiggles and filters everything except target viral DNA fragments SquiggleFilter avoids the expensive basecalling step and uses hardware accelerated subsequence Dynamic Time Warping sDTW We show that our 14 3W 13 25 sq mm accelerator has 274 greater throughput and 3481 lower latency than existing GPU based solutions while consuming half the power DTWax overcomes the on chip memory limitations of SquiggleFilter by optimizing its high accuracy sDTW algorithm for GPUs resulting in a 1 92X sequencing speedup and 3 64X compute speedup costup For the untargeted classification and analysis of microbiome we discuss RawMap which is a machine learning based smart and efficient solution that reduces sequencing time and cost by 24% and computing cost by 22% We also discuss how RawMap may be used as an alternative to the RT PCR test for viral load quantification of SARS CoV 2 Minimap2 is a software used in all MinION workflows minimap2 accelerated mm2 ax is a heterogeneous design for sequence mapping where minimap2 s bottleneck step is sped up on the GPU with bit exact output mm2 ax on an NVIDIA A100 GPU improves the bottleneck step chaining with 4 07 1 93X speedup costup over a SIMD baseline Finally we envision a portable solution to microbial diagnostics with a laptop connected to the MinION DTWax can perform targeted virus detection on the GPU and RawMap does untargeted microbiome classification on the CPU Post sequencing tasks like basecalling alignment using mm2 ax and variant calling use the GPU

Toward Human-Level Artificial Intelligence Eitan Michael Azoff, 2024-09-18 Is a computer simulation of a brain sufficient to make it intelligent Do you need consciousness to have intelligence Do you need to be alive to have consciousness This book has a dual purpose First it provides a multi disciplinary research survey across all branches of neuroscience and AI research that relate to this book s mission of bringing AI research closer to building a human level AI HLAI system It provides an encapsulation of key ideas and concepts and provides all the references for the reader to delve deeper much of the survey coverage is of recent pioneering research Second the final part of this book brings together key concepts from the survey and makes suggestions for building HLAI This book provides accessible explanations of numerous key concepts from neuroscience and artificial intelligence research including The focus on visual processing and thinking and the possible role of brain lateralization toward visual thinking and intelligence Diffuse decision making by ensembles of neurons The inside out model to give HLAI an inner life and the possible role for cognitive architecture implementing the scientific method through the plan do check act cycle within that model learning to learn A neuromodulation feature such as a machine equivalent of dopamine that reinforces learning The embodied HLAI machine a neurorobot that interacts with the physical world as it learns This book concludes by

explaining the hypothesis that computer simulation is sufficient to take AI research further toward HLAI and that the scientific method is our means to enable that progress This book will be of great interest to a broad audience particularly neuroscientists and AI researchers investors in AI projects and lay readers looking for an accessible introduction to the intersection of neuroscience and artificial intelligence
