Technology Beyond Content Brad Hokanson, Gregory Clinton, Andrew A. Tawfik, Amy Grincewicz, Matthew Schmidt, 2020-04-09 This book is the outcome of a research symposium sponsored by the Association for Educational Communications and Technology AECT Consisting of twenty four chapters including an introduction and conclusion it argues that informational content should not be the main element of education and that to provide more for learners it is necessary to go beyond content and address other skills and capabilities It also discusses the false premise that learning is complete when the information is known not when learners seek more their own directions answers and ideas The authors assert that the ability to synthesize solve problems and generate ideas is not based on specific content although education often focuses solely on teaching content Further they state that content can be separated from the learning process and that instructional design and educational technology must be about the skills habits and beliefs to be learned
