Ethics in Forensic Science J.C. Upshaw Downs, Anjali Ranadive Swienton, 2012-03-26 The word ethical can be defined as proper conduct A failure of forensic scientists to act ethically can result in serious adverse outcomes However while seemingly simple to define the application of being ethical is somewhat more obscure That is when is ethical ethical and when is it not Because we have an adversarial legal system differences of opinion exist in forensic science However there are instances when differences are so divergent that an individual's ethics are called into question In light of not only the O J Simpson trial the first national trial to question the ethical behavior of forensic scientists and the National Academy of Science critique of forensic science ethical issues have come to the forefront of concern within the forensic community Ethics in Forensic Science draws upon the expertise of the editors and numerous contributors in order to present several different perspectives with the goal of better understanding when ethical lines are crossed In order to achieve this goal comparisons of various canons of ethics from medicine law science religion and politics will be examined and applied Lastly case studies will be presented to illustrate ethical dilemmas and provide a real world context for readers Edited by a well known forensic attorney consultant and a leading medical examiner Ethics in Forensic Science addresses the concerns of the entire forensic community the laboratory medical examiner and crime scene investigator It will be an invaluable reference for practitioners in forensic and or criminal justice programs crime scene investigators photographers law enforcement training centers police academies and local agencies as well as forensic consultants and forensic scientists

Viattchenin,2013-04-17 The present book outlines a new approach to possibilistic clustering in which the sought clustering structure of the set of objects is based directly on the formal definition of fuzzy cluster and the possibilistic memberships are determined directly from the values of the pairwise similarity of objects The proposed approach can be used for solving different classification problems Here some techniques that might be useful at this purpose are outlined including a methodology for constructing a set of labeled objects for a semi supervised clustering

algorithm a methodology for reducing analyzed attribute space dimensionality and a methods for asymmetric data processing Moreover a technique for constructing a subset of the most appropriate alternatives for a set of weak fuzzy preference relations which are defined on a universe of alternatives is described in detail and a method for rapidly prototyping the Mamdani s fuzzy inference systems is introduced This book addresses engineers scientists professors students and post graduate students who are interested in and work with fuzzy clustering and its applications

Information Processing and Management Vinu V Das, R. Vijayakumar, Narayan C. Debnath, Janahanlal Stephen, Natarajan Meghanathan, Suresh Sankaranarayanan, P.M. Thankachan, Ford Lumban Gaol, Nessy Thankachan, 2010-04-03 It is my pleasure to write the preface for Information Processing and Management This book aims to

bring together innovative results and new research trends in information processing computer science and management engineering If an information processing system is able to perform useful actions for an objective in a given domain it is because the system knows something about that domain The more knowledge it has the more useful it can be to its users Without that knowledge the system itself is useless In the information systems field there is conceptual modeling for the activity that elicits and describes the general knowledge a particular information system needs to know The main objective of conceptual modeling is to obtain that description which is called a conceptual schema Conceptual schemas are written in languages called conceptual modeling languages Conceptual modeling is an important part of requirements engineering the first and most important phase in the development of an information system

In contrast to classical image analysis methods that employ crisp mathematics fuzzy set techniques provide an elegant foundation and a set of rich methodologies for diverse image processing tasks However a solid understanding of fuzzy processing requires a firm grasp of essential principles and background knowledge Fuzzy Image Processing and Applications with MATLAB presents the integral science and essential mathematics behind this exciting and dynamic branch of image processing which is becoming increasingly important to applications in areas such as remote sensing medical imaging and video surveillance to name a few Many texts cover the use of crisp sets but this book stands apart by exploring the explosion of interest and significant growth in fuzzy set image processing The distinguished authors clearly lay out theoretical concepts and applications of fuzzy set theory and their impact on areas such as enhancement segmentation filtering edge detection content based image retrieval pattern recognition and clustering They describe all components of fuzzy detailing preprocessing threshold detection and match based segmentation Minimize Processing Errors Using Dynamic Fuzzy Set Theory This book serves as a primer on MATLAB and demonstrates how to implement it in fuzzy image processing methods It illustrates how the code can be used to improve calculations that help prevent or deal with imprecision whether it is in the grey level of the image geometry of an object definition of an object's edges or boundaries or in knowledge representation object recognition or image interpretation The text addresses these considerations by applying fuzzy set theory to image thresholding segmentation edge detection enhancement clustering color retrieval clustering in pattern recognition and other image processing operations Highlighting key ideas the authors present the experimental results of their own new fuzzy approaches and those suggested by different authors offering data and insights that will be useful to teachers scientists and engineers among others Mental Maps Janne Holmén, Norbert Götz, 2021-11-28

The concept of mental maps is used in several disciplines including geography psychology history linguistics economics anthropology political science and computer game design However until now there has been little communication between these disciplines and methodological schools involved in mental mapping Mental Maps Geographical and Historical Perspectives addresses this situation by bringing together scholars from some of the related fields Ute Schneider examines the development of German geographer Heinrich Schiffrers mental maps using his books on Africa from the 1930s to the 1970s Efrat Ben Ze'ev and Chloé Yvroux investigate conceptions of Israel and Palestine particularly the West Bank held by French and Israeli students By superimposing large numbers of sketch maps Clarisse Didelon Loiseau Sophie de Ruffray and Nicolas Lambert identify soft and hard macro regions on the mental maps of geography students across the world Janne Holmén investigates whether the Baltic and the Mediterranean Seas are seen as links or divisions between the countries that

line their shores according to the mental maps of high school seniors Similarly Dario Musolino maps regional preferences of Italian entrepreneurs Finally Lars Erik Edlund offers an essayistic account of mental mapping based on memories of maps in his own family This edited volume book uses printed maps survey data and hand drawn maps as sources contributing to the study of human perception of space from the perspectives of different disciplines The chapters in this book were originally published as a special issue of the Journal of Cultural Geography
