 wind and solar generation on a range of time and geographic scales If new supplies can be produced responsibly natural gas  
 can deliver immediate reductions in carbon emissions from the power sector Methane the main component of natural gas

already is being captured from landfills and other renewable sources which can contribute a growing share of natural gas supplies in the decades ahead As renewable energy and natural gas become more economical their share in global power generation markets is increasing at the expense of coal Working together renewable energy and natural gas can facilitate a rapid decarbonization of the power sector and provide the foundation for a low carbon energy future starting now from back cover NASA Authorization for Fiscal Year 1968, Hearings....
