Using Algebraic Geometry

David A. Cox, John Little, DONAL OSHEA, 2013-04-17 In recent years the discovery of new algorithms for dealing with polynomial equations coupled with their implementation on fast inexpensive computers has sparked a minor revolution in the study and practice of algebraic geometry These algorithmic methods have also given rise to some exciting new applications of algebraic geometry This book illustrates the many uses of algebraic geometry highlighting some of the more recent applications of Grobner bases and resultants In order to do this the authors provide an introduction to some algebraic objects and techniques which are more advanced than one typically encounters in a first course but nonetheless of great utility The book is written for nonspecialists and for readers with a diverse range of backgrounds It assumes knowledge of the material covered in a standard undergraduate course in abstract algebra and it would help to have some previous exposure to Grobner bases The book does not assume the reader is familiar with more advanced concepts such as modules

Algebraic Structures and Applications Ahmed Laghribi, Andr, Leroy, 2025-09-24 This volume contains the proceedings of two conferences NonCommutative Rings and their Applications NCRA VIII and Quadratic Forms Rings and Codes QFRC II that were held in August 2023 at Artois University Lens France The book contains a few survey papers and many research articles The latter have been written in an accessible style and should be of interest to specialists researchers and graduate students The subjects cover classical ring theory e.g Baer rings separativity problem group algebras quasi duo coding theory

MacWilliams identities codes over Galois rings or from Lie algebras Quadratic forms are also present in two important and nicely written papers Finally some papers offer new perspectives moving from classical ring theory to universal algebras and non associative structures

Algebraic Geometric Codes: Basic Notions Michael Tsfasman,Serge Vlăduț,Dmitry Nogin,2022-04-15 The book is devoted to the theory of algebraic geometric codes a subject formed on the border of several domains of mathematics On one side there are such classical areas as algebraic geometry and number theory on the other information transmission theory combinatorics finite geometries dense packings etc The authors give a unique perspective on the subject Whereas most books on coding theory build up coding theory from within starting from elementary concepts and almost always finishing without reaching a certain depth this book constantly looks for interpretations that connect coding theory to algebraic geometry and number

theory There are no prerequisites other than a standard algebra graduate course The first two chapters of the book can serve as an introduction to coding theory and algebraic geometry respectively Special attention is given to the geometry of curves over finite fields in the third chapter Finally in the last chapter the authors explain relations between all of these the theory of algebraic geometric codes *Electrical & Electronics Abstracts* ,1997 **Official Gazette of the United States Patent and Trademark Office** ,1998 **Quantum Error Correction and Fault Tolerant Quantum Computing** Frank Gaitan,2018-10-03 It was once widely believed that quantum computation would never become a reality However the discovery of quantum error correction and the proof of the accuracy threshold theorem nearly ten years ago gave rise to extensive development and research aimed at creating a working scalable quantum computer Over a decade has passed since this monumental accomplishment yet no book length pedagogical presentation of this important theory exists Quantum Error Correction and Fault Tolerant Quantum Computing offers the first full length exposition on the realization of a theory once thought impossible It provides in depth coverage on the most important class of codes discovered to date quantum stabilizer codes It brings together the central themes of quantum error correction and fault tolerant procedures to prove the accuracy threshold theorem for a particular noise error model The author also includes a derivation of well known bounds on the parameters of quantum error correcting code Packed with over 40 real world problems 35 field exercises and 17 worked out examples this book is the essential resource for any researcher interested in entering the quantum field as well as for those who want to understand how the unexpected realization of quantum computing is possible *Artificial Intelligence in Music, Sound, Art and Design* Juan Romero,Tiago Martins,Nereida Rodríguez-Fernández,2021-04-01 This book constitutes the refereed proceedings of the 10th European Conference on Artificial Intelligence in Music Sound Art and Design EvoMUSART 2021 held as part of Evo 2021 as Virtual Event in April 2021 co located with the Evo 2021 events EvoCOP EvoApplications and EuroGP The 24 revised full papers and 7 short papers presented in this book were carefully reviewed and selected from 66 submissions They cover a wide range of topics and application areas including generative approaches to music and visual art deep learning and architecture **Emerging Technologies, Novel Crimes, and Security** Hedi Nasheri,2024-12-30 This book provides a holistic overview of the complexities of modern technological advances and their implications for crime and security It examines the societal dilemmas that accompany these technologies their strategic impact on geopolitics governments business and civil society The increasingly interconnected world gives rise to novel crimes and creates a new complex set of threats Understanding this landscape is essential to strategizing for the prevention protection mitigation and risk assessment of technology related crime Practical and approachable this book builds knowledge and awareness of the impact of emerging technologies on crime and security among professionals students academicians researchers and policymakers The Theory of Error-correcting Codes Florence Jessie MacWilliams,Neil James Alexander Sloane,1977 Generative AI: Foundations, Models and Applications Dr. K.
