Max Streaming Latest Store Hours:

Media Libraries in an Age of Unending Consumption Mike Van Esler, 2023-10-24 As the home video market upended traditional film industry models media libraries emerged as important sources of ancillary revenue The inflection point for media library exploitation came in 2007 when Netflix launched its streaming service relying on extensive licensing of film and television libraries to grow its subscriber base In this book Mike Van Esler examines how media libraries and business models have evolved since the home video era with particular emphasis placed on the streaming age of the past fifteen years Van Esler argues that media libraries have grown beyond their usages from the pre home video era to become central to today's corporate media strategy By studying the ways in which media library exploitation has scaled up since the turn of the new millennium the author identifies insights into larger media industry trends Ultimately this book explores the intersection of corporate media independent distributors private equity tech companies and audiences Scholars of media studies business and sociology will find this book of particular interest

The Business of Television Ken Basin, 2024-09-19 In this expanded and updated second edition esteemed television executive and Harvard lecturer Ken Basin offers a comprehensive and readable overview of the business financial and legal structure of the U S television industry as well as its deal making norms The Business of Television explores the basic structure and recent history of the television and streaming business rights and talent negotiations intellectual

property backend deals licensing international production and much more This expanded and updated second edition also features an in depth exploration of the evolution of the streaming business offers valuable new insights about negotiation reflects the historic impacts of the 2020 Covid 19 pandemic and 2023 WGA and SAG AFTRA strikes addresses the intersection of artificial intelligence technology and intellectual property law and provides a greater breadth and depth of technical material about a wide variety of common television deals The book also includes breakdowns after each chapter summarizing major deal terms and points of negotiation a significantly expanded glossary an extensive list of referenced articles and cases and a wealth of real world examples to help readers put the material into context Written for a diverse audience of working or aspiring creative professionals executives agents managers lawyers and students *The Business of Television* is the definitive reference guide for the ever changing television industry *InfoWorld*, 1989-01-23 InfoWorld is targeted to Senior IT professionals Content is segmented into Channels and Topic Centers InfoWorld also celebrates people companies and projects *Using Additional Information in Streaming Algorithms* Raffael Buff, 2016-10-04 Streaming problems are algorithmic problems that are mainly characterized by their massive input streams Because of these data streams the algorithms for these problems are forced to be space efficient as the input stream length generally exceeds the available storage In this thesis the two streaming problems most frequent item and number of distinct items are studied in detail relating to their algorithmic complexities and it is compared whether the verification of solution hypotheses has lower algorithmic complexity than computing a solution from the data stream For this analysis we introduce some concepts to prove space complexity lower bounds for an approximative setting and for hypothesis verification For the most frequent item problem which consists in identifying the item which has the highest occurrence within the data stream we can prove a linear space complexity lower bound for the deterministic and probabilistic setting This implies that in practice this streaming problem cannot be solved in a satisfactory way since every algorithm has to exceed any reasonable storage limit For some settings the upper and lower bounds are almost tight which implies that we have designed an almost optimal algorithm Even for small approximation ratios we can prove a linear lower bound but not for larger ones Nevertheless we are not able to design an algorithm that solves the most frequent item problem space efficiently for large approximation ratios Furthermore if we want to verify whether a hypothesis of the highest frequency count is true or not we get exactly the same space complexity lower bounds which leads to the conclusion that we are likely not able to profit from a stated hypothesis The number of distinct items problem counts all different elements of the input stream If we want to solve this problem exactly in a deterministic or probabilistic setting or approximately with a deterministic algorithm we require once again linear storage size which is tight to the upper bound However for the approximative and probabilistic setting we can enhance an already known space efficient algorithm such that it is usable for arbitrarily small approximation ratios and arbitrarily good success probabilities The hypothesis verification leads once again to the same lower bounds However there are some streaming

problems that are able to profit from additional information such as hypotheses as e g the median problem
