Vray 5.0 (NEXT) User Guide Serdar Hakan DÜZGÖREN, Universal V Ray Settings This page provides a tutorial on universal settings for V Ray that work for most still images Overview The universal settings comprise a

set of settings that work very well for still images in many situations and are the default for V-Ray Next. Please note that these settings are not optimal in the sense that with enough tweaking you can probably get similar quality with faster render times. The beauty of these settings though is that they require almost no tweaking and you are guaranteed to get a good result in the end. The advantages of these settings are: 0 very little parameters for controlling render quality vs speed 0 works for a very large number of scenes 0 produces high quality results. With the Progressive Image Sampler the default Render time min is set to 1.0 which might be insufficient for some scenes. You can reset this to 0.0 min and rendering will continue until the Noise threshold is reached. Setting the V-Ray Renderer 1. Set V-Ray as the current rendering engine with the default V-Ray settings. 2. The default settings are optimized to work universally so it is recommended to keep them. Progressive image sampler with 100 Max subdivs and 1 Min subdivs. GI enabled using Brute Force as Primary GI engine and Light Cache as Secondary GI engine. 3. You can further refine the noise levels from the Progressive Image sampler rollout by adjusting the Noise Threshold and placing a 0 value for the Render time min. 4. You can control the amount of AA vs shading samples for materials, lights, GI using the Min shading rate parameter in the Image Sampler rollout but the default value is optimised to work well for the majority of scenes.

Deploying Artificial Intelligence to Achieve the UN Sustainable Development Goals
Arthur Guseni Oliver Mutambara, 2025-07-01. This book provides research insights into how Artificial Intelligence (AI) can be used to achieve the UN's Sustainable Development Goals (SDGs), 17 interconnected goals designed to address the world's most pressing challenges by 2030. It reviews the SDGs and discusses why progress has been mixed and uneven across different countries, regions, and goals. The book posits that attaining the SDGs will depend on enhanced global cooperation, increased funding, improved infrastructure, public-private partnerships, regional/continental integration, addressing the climate crisis, inclusive economic transformation, and visionary leadership. More specifically, the publication advocates leveraging innovative and transformative technologies, particularly the deployment of AI. The research acknowledges the risks of digital imperialism, data colonialism, and technological exclusion, especially in emerging and least industrialised economies. Hence, in deploying AI to achieve the SDGs, the book puts a premium on decoloniality in AI systems and democratising AI technology. Provides a critique of the current SDGs approach by reframing the goals as a comprehensive risk assessment of humanity's most pressing threats in the 21st century. Features broad and holistic interventions to accelerate the attainment of the SDGs. Provides a comprehensive but accessible introduction to AI concepts and advanced innovations such as AlphaFold, ChatGPT, DeepSeek R1, Grok 3, and autonomous vehicles, drones, and driverless cars. Discusses the AI strategies of leading economies and assesses the impact of AI on geopolitics. Provides a comprehensive critique of global AI efforts by the UN and African Union while proffering alternative paradigms and frameworks. Presents the enablers, drivers, and strategic framework of AI deployment to achieve the SDGs. Develops and presents details of six distinct but related components of a novel Strategic Framework for developing and adopting AI: Vision, Strategy, Policy, Governance, Legislation, Regulations, and Implementation.

Matrix Outlines specific ways that AI can be deployed to achieve each of the 17 SDGs and reviews seven countries experiences Explores an innovative forward looking and technology driven framework for equitable global socio economic transformation to succeed the SDGs post 2030
