≡ Unit/Module	Chapter 7

▼ 3 Important Molecules for Cell Membrane Structure

1. Lipids
2. Proteins
3. Carbohydrates

▼ Lipids

• Phospholipids

- a particular lipid in membranes
- important because it's an **Amphipathic** molecule - which has both *hydrophilic* (love water) and *hydrophobic* (water avoiding) regions
 - the phospholipid head is **Hydrophilic**
 - the fatty acid tails are **Hydrophobic**
 - **BOTH** form the interior of the Phospholipid Bilayer

Proteins

- they have both *hydrophilic* and *hydrophobic* regions

Mosaic Model

- the current model of membrane structure

▼ Membrane Properties

!! membranes are fluid because the components can move

!! membranes are held together mainly by hydrophobic interactions

▼ Factors that affect Membrane Fluidity

1. Phospholipids: with double bonds are fluid at lower temperatures
2. Cholesterol: in the membrane makes it less fluid at body temperature

▼ Main Groups of Membrane Proteins

- **Function:** transport, enzyme activity, signal transduction, intercellular joining, cell-cell recognition, attachment to cytoskeleton & to the extracellular matrix
- 1. **Integral Proteins:** are embedded in the membrane and often span the entire membrane, called transmembrane proteins
- 2. **Peripheral Proteins:** is attached to the inside or outside of the membrane but are not embedded in the membrane

▼ Membrane Carbohydrates Important because of:

- **Cell-Cell Recognition:** the cell's ability to distinguish 1 type of neighboring cell from another
 - the process is important in development when cells become tissues or in rejection of foreign cells by the immune system
- Membrane carbohydrates (**Oligosaccharides**) are short, branched chains of 15 or fewer sugars attached to membrane lipids (**glycolipids**) or membrane proteins (**glycoproteins**)

▼ Membrane Transport
