

NOTE: Items in **black** apply to both codes sets.

Items in **blue** are unique to ICD-9-CM, Vol. 3.

Items in **purple** are unique to ICD-10-PCS.

General Coding Conventions & Legal Guidelines

- The alphabetic index lists common surgical and procedural terminology. ICD-10-PCS uses the alphabetic index to enable the coder to determine the most accurate code to use to compose the code. Consulting the alphabetic index is optional in ICD-10-PCS because an accurate code can be constructed directly from the correct table.
- ICD-9-CM, Vol. 3, uses the Tabular List to present all codes. Numerical codes with their complete code descriptions. ICD-10-PCS uses the Tabular List to enable the coder to complete the correct code.
- ICD-9-CM, Vol. 3, codes are two, three, or four digits. Codes must be reported with the total number of digits required. Symbols in the Tabular List will instruct the coder when additional digits are required. ICD-10-PCS codes are seven alphanumeric characters. All letters of the alphabet are used except the

letters I and O because they are too easily confused with the numbers one and zero.

Examples

- 25.1 Incision of pulvis
- 35.06 Transapical replacement of aortic valve
- 56.10675 Bypass, inferior vena cava, superior mesenteric vein with autologous tissue substitute, open
- Never code directly from the alphabetic index. Always check the Tabular List or Tables to confirm the code is accurate and complete.
- Codes must be reported to their highest level of specificity. When a coder cannot determine the appropriate specificity from the documentation, the physician should be queried for the detail required.
- ICD-10-PCS codes may be constructed from all options offered on the same row or level across for characters 4-7.

- The word **and** should be translated as "and/or."
- Parentheses () are shown surrounding nonessential modifiers—that is, optional terms that may or may not be included in the documentation.

Examples

- Bleeding therapy (intracranial) 99.82
Stem (peripartum) (embolization)
 - When the alphabetic index directs you to sort, and also, or use, it is providing alternate main terms that might lead to the correct code.
- Examples**
Autotransfusion (whole blood) - see Blood, transfusion
Aorticoprosthesis - see also Repair, aortic repair defect
35.11
Relaxation, scar tissue - see Release
Renal plexus - see Nerve, Autonomic Sympathetic

Example

- Illustration of:**
Aortic branches (depending aortic branches) into heart muscle
Blood vessels into myocardium
Indirect heart resuscitatorization NOE

This note relates nothing about how to sequence these codes. **EX: 00.93** Transplant from cadaver Code also organ transplant procedure.
 - A "Code first..." notation appearing in the Tabular List directs you to do two things: (1) find a second code to completely report this circumstance, and (2) list this second code after the first code. **EX: 17.4** Robotic assisted procedures Code first primary procedure.
 - A "Use additional code..." notation appearing in the Tabular List directs you to do two things: (1) find a second code to completely report this circumstance, and (2) sequence this second code first (i.e., list first, before the other code). **EX: 70.50** Repair of rectocolic with graft or prosthesis Use additional code for biological substance (70.54) or synthetic substance (70.55), if known.

- Inspections (character 3) performed on multiple tubular body parts (character 4) use the character that reports the most distal part inspected. **EX: 07J79Z2** Inspection of uterus, via natural opening endoscopic.
- For inspections (character 3) performed on non-tubular body parts in a region, report a body part (character 4) that identifies the entire area. **EX: 00J05Z2** Inspection, via natural opening, of upper intestinal tract.
- When a biopsy (character 3) root operation "Excision," "Extraction," or "Drainage" is followed by a more extensive related procedure (character 3) root operation "Destruction," "Excision," or "Resection" at the same anatomical site, report each procedure separately. **EX: 02S42Z4** Percutaneous excision, lower lung lobe, left, diagnostic. **02TJ0Z2** Open resection, lower lung lobe, left.
