Reliability Theory and Models Mohamed Abdel-Hameed, 2012-12-02

Reliability Theory and Models Stochastic Failure Models Optimal Maintenance Policies Life Testing and Structures contains the proceedings of a Symposium on Stochastic Failure Models Replacement and Maintenance Policies and Accelerated Life Testing held in Charlotte North Carolina on June 24 26 1983 Contributors discuss the directions for research on stochastic failure models and maintenance and replacement policies as well as statistical and computational aspects of reliability This text is divided into five sections and is comprised of 17 chapters the first of which introduces the reader to Markov and semi Markov models of deterioration in light of the results on representation and characterization of Markov processes The discussion then turns to the concept of minimal repair situations in which the appropriate stochastic process is a damage or wear process and optimum policies for several maintenance models based on the imperfect repair model of Brown and Proschan The chapters that follow explore optimal replacement for self repairing shock models the implementation of an iterative scheme for certain Markovian wear damage models and a Markov decision model for determining the optimal inventories of repairable spare parts for redundant systems This book also considers the reliability and maintenance of very

Seasonality in Human Mortality Roland Rau, 2006-11-24 Seasonal fluctuations in mortality are a persistent phenomenon across populations In Western countries of the Northern hemisphere mortality is typically larger in winter than in summer which is attributed to the detrimental effects of cold to health This does however not explain why in colder countries the differences between winter and summer mortality are smaller than in countries with warm or moderate climate This book therefore investigates whether sociodemographic and socioeconomic factors play a role as important for seasonal mortality as they do for mortality in general Using modern statistical methods the book shows for example for the United States that the fluctuations between winter and summer mortality are smaller the more years someone has spent in school

Mathematical and Statistical Models and Methods in Reliability V.V. Rykov, N. Balakrishnan, M.S. Nikulin, 2010-11-02 The book is a selection of invited chapters all of which deal with various aspects of mathematical and statistical models and methods in reliability Written by renowned experts in the field of reliability the contributions cover a wide range of applications reflecting recent developments in areas such as survival analysis aging lifetime data analysis artificial intelligence medicine carcinogenesis studies nuclear power financial modeling aircraft engineering quality control and transportation Mathematical and Statistical Models and Methods in Reliability is an excellent reference text for researchers and practitioners in applied probability and statistics industrial statistics engineering medicine finance transportation the oil and gas industry and artificial intelligence

Analysis of Multivariate Survival Data Philip Hougaard, 2012-12-06 Survival data or more general time to event data occur in many areas including medicine biology engineering economics and demography but previously standard methods have requested that all time variables are univariate and independent This book extends the field by allowing for multivariate times Applications where such data appear are survival of twins survival of married couples and families time to failure of right and left kidney for diabetic patients life history data with time to outbreak of disease complications and death recurrent episodes of diseases and cross over studies with time responses As the field is rather new the concepts and the possible types of data are described in detail and basic aspects of how dependence can appear in such data is discussed Four different approaches to the analysis of such data are presented The multi state models where a life history is described as the subject moving from state to state is the most classical approach The Markov models make up an important special case but it is also described how easily more general models are set up and analyzed Frailty models which are random effects models for survival data made a second approach extending from the most simple shared frailty models which are considered in detail to models with more complicated dependence structures over individuals or over time Marginal modelling has become a popular approach to evaluate the effect of explanatory factors in the presence of dependence but without having specified a statistical model for the dependence Finally the completely non parametric approach to bivariate censored survival data is described This book is

aimed at investigators who need to analyze multivariate survival data but due to its focus on the concepts and the modelling aspects it is also useful for persons interested in such data but **Stochastic Inequalities** Moshe Shaked,1992
