Polar Codes Mohammad Rowshan, Emanuele Viterbo, 2025-10-29 Understand a cutting edge new class of error correction codes with this introduction Channel coding is a pivotal technique employed to account for potential errors due to channel noise or interference by adding layers of redundancy to information prior to transmission or storage Should errors appear in the transmitted sequence upon reaching its destination they can be corrected with reference to the redundant layers Polar codes are a new class of error correction codes that provably achieve the capacity of binary discrete memoryless channels Their distinct advantages have led to their incorporation in the logical control channels of the fifth generation of wireless communications 5G Possessing robust and competitive error correction capabilities for short and medium length codes positions them strategically to fulfill a pivotal role in various communication systems as we move towards the sixth generation of wireless communication 6G and beyond Polar Codes provides a thorough accessible overview of this new class of codes and its applications Beginning with the foundational theories underlying polar codes it guides readers through the construction of polar codes their variants and their encoding and decoding processes The result is a must have for coding researchers and professionals looking to develop an edge in the wireless communications of the future Polar Codes readers will also find Continuous connections between discussed concepts and current 5G standards Snippets of code in MATLAB Python to illustrate key tools End of chapter problems and bibliographical notes to facilitate learning and provide references for further reading Polar Codes is ideal for graduate students and researchers in coding and information theory as well as engineers working in communications and related industries

Dark Matter and Dark Energy Sabino Matarrese, Monica Colpi, Vittorio Gorini, Ugo Moschella, 2011-02-10 This book brings together reviews from leading international authorities on the developments in the study of dark matter and dark energy as seen from both their cosmological and particle physics side

Studying the physical and astrophysical properties of the dark components of our Universe is a crucial step towards the ultimate goal of unveiling their nature. The work developed from a doctoral school sponsored by the Italian Society of General Relativity and Gravitation. The book starts with a concise introduction to the standard cosmological model as well as with a presentation of the theory of linear perturbations around a homogeneous and isotropic background. It covers the particle physics and cosmological aspects of dark matter and dynamical dark energy including a discussion of how modified theories of gravity could provide a possible candidate for dark energy. A detailed presentation is also given of the possible ways of testing the theory in terms of cosmic microwave background, galaxy redshift surveys and weak gravitational lensing observations. Included is a chapter reviewing extensively the direct and indirect methods of detection of the hypothetical dark matter particles. Also included is a self-contained introduction to the techniques and most important results of numerical N -body simulations in cosmology. This volume will be useful to researchers, PhD and graduate students in Astrophysics, Cosmology, Physics and Mathematics who are interested in cosmology, dark matter and dark energy.

[Critical comparison of major seismic codes for buildings](#) fib Fédération internationale du béton, 2013-01-01 fib Bulletin 69 illustrates and compares major buildings seismic codes applied in the different Continents, namely U.S., Japan, New Zealand, Europe, Canada, Chile and Mexico. Bulletin 69 was prepared by Task Group 7.6 of fib Commission 7 under the leadership of the late Professor Robert Bob Park, which in tandem with Professor Paulay had developed in the seventies new fundamental design concepts, most notably capacity design approach and structural design for ductility that had made the NZ seismic Code the most advanced one of the time. This new approach has highly influenced the development of Eurocode 8 to which Bob Park has significantly contributed. Bob Park was also well informed of the situation in Japan, USA, Canada and South America. Such a wide view is reflected in Bulletin 69 showing similarities and differences among the major seismic codes, accompanied as far as possible by comments hopefully useful for fostering international harmonization. A comprehensive summary of the major codes is provided in the first chapter of the bulletin. All codes are separately presented according to a common framework: an introduction section which describes the history, the philosophy, the process, development, the performance-based criteria, the strength of materials and the incorporation of strength reduction factors of each code; a second section devoted to the demand side which specifies the seismic design actions and associated criteria of each code for areas of different seismicity.

and for structures with different ductility properties requirements a third section devoted to the capacity side which describes the capacities of members and joints and associated criteria of each code including member strengths in flexure shear and bars anchorage desirable hierarchies of strength attainment deformation capacities of mechanisms of inelastic deformation detailing of beams columns and structural walls detailing of beam column joints for shear and the detailing of diaphragms The second chapter is devoted to the comparison of the more significant issues dealt in the considered codes This includes seismic design actions and associated criteria capacity design practice beams columns confinement structural walls and joints It is felt that fib Bulletin 69 represents a useful unique instrument for rapidly gaining an overview of the distinguishing features of the major world codes under both their conceptual framework and application rules **Energy**
