 (Dimoska),Izabela Mitreska,Mustafa Ceyhan,Enis Karaarslan,2022-12-31 There is rapid development and change in the field
 of computer science today These affect all areas of life Emerging topics in computer science are covered in this book In the
 first chapter a specific IoT application called a smart mailbox with face recognition which uses cellular connectivity and
 image processing to securely deliver valuable documents The prototype for this system includes a fingerprint reader camera
 electromagnetic lock and various other components connected to an Arduino Uno and a Raspberry Pi and uses OpenCV and
 Python software for face detection and recognition In the second chapter authors compares and evaluates the main
 characteristics of 5G channels and the performance of two channel coding candidates low density parity check LDPC codes
 and polar codes The analysis considers block error rate bit error rate computational complexity and flexibility and finds that
 polar codes outperform LDPC code systems though LDPC is still a viable option compared to other code systems The third
 chapter focuses on how to reliably process and store DNA sequences in EHR systems without any modifications To achieve
 this the authors introduce a coding technique and evaluate its effectiveness using the Hamming code and Reed Solomon
 coding schemes on a sample data set The results show that the Reed Solomon coding scheme outperforms the Hamming
 code in terms of error detection and correction for securely processing DNA records to EHR systems The next chapter
 investigates the robustness of AI models trained on thyroid ultrasound images using different convolutional neural network
 CNN architectures VGG19 Xception ResNet50V2 and EfficientNetB2 against adversarial attacks using the fast gradient sign
 method FGSM basic iterative method BIM and projected gradient descent PGD techniques In the fifth chapter it was
 questioned whether artificial intelligence could write an academic article In this direction an academic article was created
 and evaluated by OpenAI ChatGPT The final chapter proposes an application to measure RF signal intensities in urban areas
 and use that information to estimate the amount of energy that can be harvested from these signals This information is then
