Knowledge and Skill Chains in Engineering and Manufacturing Eiji Arai, Eindhoven University of Technology, Fumihiko Kimura, Keiichi Shirase, 2008-12-21 Since the first DIISM conference which took place 9 years ago the world has seen drastic changes including the transformation of manufacturing and engineering software and the information and communication technologies deployed. The conditions for manufacturing and engineering have changed on a large scale in terms of technology enabled collaboration among the fields of design engineering production usage maintenance and recycling/disposal. These changes can be observed in rapidly growing fields such as supply chain management. As for production technologies at factory floors new visions on human machine co-existing systems involve both knowledge management and multi-media technologies. Therefore because of these changes the importance of information infrastructure for manufacturing has increased stunningly. Information infrastructure plays a key role in integrating diverse fields of manufacturing engineering and management. This in addition to its basic role as the information and communication platform for the production systems. Eventually it should also serve the synthetic function of knowledge management during the life cycles of both the production systems and their products and for all stakeholders. *January 2022 - Surplus Record Machinery & Equipment Directory* Surplus Record, 2022-01-01 SURPLUS RECORD is the leading independent business directory of new and used capital equipment machine tools machinery and industrial equipment listing over 95 000 industrial assets including metalworking and fabricating machine tools chemical and process equipment cranes air compressors pumps motors circuit breakers generators transformers turbines and more.
