Mobile Computing C.S.R. Prabhu, 2003 Papers presented at the National Conference on Mobile Computing held at Hyderabad during 11-12 December 2001

Ubiquitous Mobile Information and Collaboration Systems Luciano Baresi, Schahram Dustdar, Harald Gall, Maristella Matera, 2005-03-01 Over recent years most business processes have changed in various dimensions e.g. exhibility interconnectivity coordination style autonomy due to market conditions organizational models and usage scenarios of information systems Frequently information is relocated within a geographically distributed system according to rules that are only seldom defined as a well coded business process This creates the need for a software infrastructure that enables ubiquitous mobile and collaboration systems UMICS The anywhere anytime any means paradigm is becoming the major challenge in conceiving designing and releasing next generation information systems New technologies like wireless networks and 3rd generation mobile phones are offering the infrastructure to conceive of information systems as ubiquitous information systems that is systems that are accessible from anywhere at any time and with any device Ubiquity is not yet another buzzword pushed by emerging technologies but is mainly a means to support new business models and encourage new ways of working This new wave of UMICS will exploit

the knowledge developed and deployed for conventional information systems but will also need new concepts models methodologies and supporting technologies to fully exploit the potentials of the enabling infrastructure and to be ready for the challenge Moreover people need to move across organizational boundaries and collaborate with others within an organization as well as between organizations The ability to query the company's distributed knowledge base and to cooperate with co-workers is still a requirement but mobility brings new access scenarios and higher complexity

The Next Generation User Interface delivers unparalleled ease of use, improved security, and true end-to-end security management. Check Point's revenues have more than doubled in each of the last two years while capturing over 50% of the VPN market and over 40% of the firewall market according to IDC Research. The explosive growth of the company is further evidenced by over 29,000 IT professionals becoming Check Point Certified so far. This book will be the complimentary to Syngress' best-selling Check Point Next Generation Security Administration, which was a foundation level guide to installing and configuring Check Point NG. This book will assume that readers have already mastered the basic functions of the product and they now want to master the more advanced security and VPN features of the product. Written by a team of Check Point Certified Instructors, the most prestigious Check Point certification, this book will provide readers with a complete reference book to Check Point NG and advanced case studies that illustrate the most difficult to implement configurations. Although not a Study Guide, this book will cover all of the objectives on Check Point's CCSE Exam. The reader will learn to design and configure a Virtual Private Network (VPN). The reader will learn to configure Check Point NG for High Availability (HA), which is the ability of a system to perform its function continuously without interruption for a significantly longer period of time than the reliabilities of its individual components would suggest. The reader will learn to use SecureUpdate, which allows them to perform simultaneous secure enterprise-wide software updates.
