Statistical Data Analysis Explained Clemens Reimann, Peter Filzmoser, Robert Garrett, Rudolf Dutter, 2011-08-31 Few books on statistical data analysis in the natural sciences are written at a level that a non statistician will easily understand This is a book written in colloquial language avoiding mathematical formulae as much as possible trying to explain statistical methods using examples and graphics instead To use the book efficiently readers should have some computer experience The book starts with the simplest of statistical concepts and carries readers forward to a deeper and more extensive understanding of the use of statistics in environmental sciences The book concerns the application of statistical and other computer methods to the management analysis and display of spatial data These data are characterised by including locations geographic coordinates which leads to the necessity of using maps to display the data and the results of the statistical methods Although the book uses examples from applied geochemistry and a large geochemical survey in particular the principles and ideas equally well apply to other natural sciences e g environmental sciences pedology hydrology geography forestry ecology and health sciences epidemiology The book is unique because it supplies direct access to software solutions based on R the Open Source version of the S language for statistics for applied environmental statistics For all graphics and tables presented in the book the R scripts are provided in the form of executable R scripts In addition a graphical user interface for R called DAS R was developed for convenient fast and
