Hard Disk Drive Servo Systems Ben M. Chen, Tong Heng Lee, Venkatakrishnan Venkataramanan, 2013-04-17 The series *Advances in Industrial Control* aims to report and encourage technology transfer in control engineering The rapid development of control technology has an impact on all areas of the control discipline New theory new controllers actuators sensors new industrial processes computer methods new applications new philosophies new challenges Much of this development work resides in industrial reports feasibility study papers and the reports of advanced collaborative projects The series offers an opportunity for researchers to present an extended exposition of such new work in all aspects of industrial control for wider and rapid dissemination From time to time a particular practical control problem emerges as a challenge to the design capabilities of the control community One example has been the activated sludge process in wastewater systems where the process is highly nonlinear and measurements are few A second example is the hard disk drive servo system These widely used systems are critical to the operation of modern computing devices They are nonlinear and demand a high precision control system for the operations of track seeking and track following There are also alternative actuation systems available to achieve these objectives In this *Advances in Industrial Control* monograph B M Chen T H Lee and V Jagacinski, John M. Flach, 2018-10-08 This textbook provides a tutorial introduction to behavioral applications of control theory Control theory describes the information one should be sensitive to and the pattern of influence that one should exert on a dynamic system in order to achieve a goal As such it is applicable to various forms of dynamic behavior The book primarily deals with manual control e g moving the cursor on a computer screen lifting an object hitting a ball driving a car both as a substantive area of study and as a useful perspective for approaching control theory It is the experience of the authors that by imagining themselves as part of a manual control system students are better able to learn numerous concepts in this field Topics include varieties of control theory such as classical optimal fuzzy adaptive and learning control as well as perception and decision making in dynamic contexts The authors also discuss implications of control theory for how experiments can be conducted in the behavioral sciences In each of these areas they have provided brief essays intended to convey key concepts that enable the reader to more easily pursue additional readings Behavioral scientists teaching control courses will be very interested in this book
