Nondestructive Testing Of Deep Foundations:

Nondestructive Testing of Deep Foundations Bernard Hertlein, Allen Davis, 2007-01-11 Nondestructive Testing involves the use of methods such as wave propagation electromagnetism electrical conductivity and thermal conductivity to test structural integrity and thereby allow nondestructive assessment of structures and the possibility of structural failures before they occur Nondestructive Testing of Deep Foundations covers different techniques designed to provide information about the integrity and quality of the material that makes up a deep foundation Nondestructive Testing methods are used at all stages of a structure's life from new construction quality control to residual lifetime prediction and even during the monitoring of demolition In addition Nondestructive Testing is being increasingly specified in deep foundation projects though often without a good understanding of its limitations and with the result that methods are often misused In order to be able to specify an appropriate method or to recognize an inappropriate specification it is necessary for the engineer specifier and or contractor to understand the capabilities and limitations of each of the methods currently in use *Nondestructive Testing of Deep Foundations* Describes the most commonly used deep foundation construction techniques including typical use of material Provides a brief history of the development of commercially available nondestructive methods Summarises each method's capabilities and limitations Acts as a one stop reference drawing together resources only previously available in conference proceedings and journal papers This manual will prove to be a welcome addition to the bookshelf of all practitioners in civil structural and geotechnical engineering and architecture It will also provide a valuable insight into this highly technical field for university researchers lecturers and postgraduate students in civil structural and geotechnical engineering

Haegeman, W.F. van Impe, 2020-09-29 This text presents findings from the 3rd International Geotechnical Seminar held in Ghent Belgium Topics include American experiences with large diameter bored piles case histories static dynamic and pile integrity testing and installation parameters and capacity of screwed piles Concrete Repair, Rehabilitation and Retrofitting II Mark G. Alexander, Hans-Dieter Beushausen, Frank Dehn, Pilate Moyo, 2008-11-13 The Second International Conference on Concrete Repair Rehabilitation and Retrofitting ICCRRR 2005 was held in Cape Town South Africa from 24-26 November 2008 The Conference followed the very successful First International Conference also in Cape Town in 2005 and continued as a collaborative venture by researchers from the South African Research Programme in Concrete Materials based at the Universities of Cape Town and The Witwatersrand and The Construction Materials Sections at Leipzig University and MFPA Leipzig in Germany The background in industry and the state of national infrastructures continues to be highly challenging and demanding The facts remain that much of our concrete infrastructure deteriorates at unacceptable rates that we need appropriate tools and techniques to undertake the vast task of sound repair maintenance and rehabilitation of such infrastructure and that all this must be undertaken with due cognisance of the limited budgets available for such work New ways need to be found to extend the useful life of concrete structures cost effectively Confidence in concrete as a viable construction material into the 21st century needs to be retained and sustained particularly considering the environmental challenges that the industry and society now face The conference proceedings contain papers presented at the conference and classified into a total of 12 sub themes which can be grouped under the three main themes of i Concrete durability aspects ii Condition assessment of concrete structures and iii Concrete repair rehabilitation and retrofitting The major interests in terms of submissions exists in the fields of innovative materials for durable concrete

construction integrated service life modelling of reinforced concrete structures NDE NDT and measurement techniques repair methods and materials and structural strengthening and retrofitting techniques The large number of high quality papers presented and the wide range of relevant topics covered confirm that these proceedings will be a valued reference for many working in the important fields of concrete durability and repair and that they will form a suitable base for discussion and provide suggestions for future development and research
