Rey,1993 The research activity

described in this working paper is a joint effort undertaken by the International Irrigation Management Institute IIMI and the Irrigation Department of Sri Lanka Two of the authors S Mohanrajah Resident Engineer Irrigation Department and M H Junaid Additional Engineer Irrigation Department were responsible for the management of the Right Bank Main Canal RBMC in Kirindi Oya during the season maha 1991 92 The monitoring network introduced under their supervision with the active

collaboration of the field staff proved to be of significant benefit for the effective accomplishment of their day to day tasks of canal management This led the authors to the conclusion that disseminating this experience even at an early stage could be of some interest to others seeking the improvement of the management of manually operated irrigation canals Emphasis has deliberately been put on methods rather than on thorough a posteriori analysis of data Thus ideas suggesting how to use simple flow data to compute indicators and derive management information has been preferred to the in depth analysis of the data The authors also hope to convey their intimate conviction of the usefulness of real collaborative action research between outside catalysts and managers in charge of irrigation systems through this paper **Cincinnati Lancet and Clinic** ,1898
