While Google doesn't specify a recommended length for SEO title tags, some say the ideal length is between 50–60 characters. This length is associated with higher search clicks and is less likely to be rewritten by Google. Most desktop and mobile browsers can display the first 50–60 characters of a title tag, and research suggests that titles under 60 characters have about a 90% chance of displaying properly in search engine results pages (SERPs). However, Google's title update prefers shorter titles, and titles that are too long are more likely to be rewritten.

Introduction to C++ for Financial Engineers Daniel J. Duffy, 2013-10-24 This book introduces the reader to the C programming language and how to use it to write applications in quantitative finance (QF) and related areas. No previous knowledge of C or C++ is required; experience with VBA, Matlab, or other programming language is sufficient. The book adopts an incremental approach, starting from basic principles, then moving on to advanced, complex techniques, and then to real-life applications in financial engineering. There are five major parts in the book: C fundamentals and object-oriented thinking in QF; Advanced object-oriented features such as inheritance and polymorphism; Template programming and the Standard Template Library (STL); An introduction to GOF design patterns and their applications in QF; Applications. The kinds of applications include binomial and trinomial methods, Monte Carlo simulation, advanced trees, partial differential equations, and finite difference methods. This book includes a companion website with all source code and many useful C++ classes that you can use in your own applications. Examples, test cases, and applications are directly relevant to QF. This book is the perfect companion to Daniel J. Duffy's book *Financial Instrument Pricing using C++* (Wiley, 2004, 0470855096, 9780470021620).
