might look at this title and shy away thinking that a book with Algorithms in its title must be just for techies and computer scientists. However, this book is very accessible to those with no background in computer science. Decisions Oftentimes Have Optimal Solutions. Today many decisions that could be made by human beings from predicting earthquakes to interpreting languages can now be made by computer algorithms with advanced analytic capabilities. Everyday we make millions of decisions from selecting a life partner to organizing your closet to scheduling your life to having a conversation. However, these decisions may be imperfect due to limited experience, implicit biases, or faulty probabilistic reasoning. Algorithms can better predict human behavior than trained psychologists and with much simpler criteria. Studies continue to show that the algorithms can do a better job than experts in a range of fields. Artificial intelligence is reshaping healthcare, science, engineering, and life. The results will make our lives more productive, better organized, and essentially much happier. Everywhere you look, artificial intelligence is beginning to permeate all types of industries, and expectations are that it will continue to grow in the future. In Atlas of AI 2021, Kate Crawford explores the twisted complex world of artificial intelligence. She argues that AI is neither artificial nor intelligent but rather a material system built from Earth's rare resources and cheap labor with severe environmental and human costs. Crawford explores the origins of AI and examines the processes that turn it into a double-edged sword capable of harming as well as helping humanity. Governments and corporations are using AI to reinforce their power and control, and we must be aware of the pitfalls.

Entertainment Computing - ICEC 2004 Matthias Rauterberg, 2004-08-23. The advancement of information and communication technologies (ICT) has enabled broad use of ICT and facilitated the use of ICT in the private and personal domain. ICT-related industries are directing their business targets to home applications. Among these applications, entertainment will differentiate ICT applications in the private and personal market from the others.

Comprehensive research and development on ICT applications for entertainment will be different for the promotion of ICT use in the home and other places for leisure. So far, engineering research and development on entertainment has never been really established in the academic communities. On the other hand, entertainment-related industries such as the video and computer game industries have been growing rapidly in the last 10 years, and today the entertainment computing business outperforms the turnover of the movie industry. Entertainment robots are drawing the attention of young people.

The event called RoboCup has been increasing the number of participants year by year. Entertainment technologies cover a broad range of products and services: movies, music, TV, including upcoming interactive TV, VCR, VoD, including music on demand, computer games, game consoles, video arcades, gambling machines, the Internet, e.g., chat rooms, board and card games, MUD, intelligent toys, edutainment, simulations, sport theme parks, virtual reality, and upcoming service robots. The role of entertainment computing focuses on users growing use of entertainment technologies at work, in school, and at home, and the impact of this technology on their behavior. Nearly every working and living place has computers, and over two thirds of children in industrialized countries have computers in their homes as well.
