Erkkilä, 2013-09-26 Global

University Rankings explores the novel topic of global university rankings and their effects on higher education in Europe. The contributions in this volume outline different discourses on global university rankings and explore the related changes concerning European higher education policies, disciplinary traditions and higher education institutions. The first global university rankings were published less than a decade ago but these policy instruments have become highly influential in shaping the approaches and institutional realities of higher education. The rankings have portrayed European academic institutions in a varying light. There is intense reflexivity over the figures leading to ideational changes and institutional adaptation that take surprisingly similar forms in different European countries. The contributions in this book critically assess global university rankings as a policy discourse that would seem to be instrumental to higher education reform throughout Europe.

Global University Rankings and the Mediatization of Higher Education Michelle Stack, 2016-04-12. Higher Education Institutions simultaneously critique and participate in national and international rankings of universities. However, this creates a difficult situation since if universities do participate in rankings they acquiesce to a system based in media logics that has little to do with academic norms of research. If they do not participate in the rankings they risk losing public funding, students and donors in an increasingly competitive and globalized environment. This book delves into the influence of journalists, business tycoons and multinational corporations in defining what world class is and how it will be measured. Rankings provide us with a rich study for understanding how universities define, deploy and manage their assets and liabilities in a mediatized, globalized economy.

**Influence of University Rankings on Institutions: Ethics, Controversies, and Competition** Kayyali, Mustafa, 2025-10-16. The influence of university rankings on higher education institutions reveals ethical concerns, controversies, and increased global competition. As rankings become a measure of academic prestige, many universities align their strategies with ranking criteria, sometimes at the expense of educational values. This pursuit of higher rankings often drives institutions to invest in research output and international visibility while potentially neglecting teaching quality or community engagement. Criticisms emerge over the transparency and fairness of ranking methodologies, raising questions about their validity and the consequences they produce. Further exploration into the ethical implications of rankings may reveal new contentious practices and competitive dynamics shaped by the prioritization of university rankings.

**Influence of University Rankings on Institutions: Ethics, Controversies, and Competition** explores how the pursuit of higher university rankings influences institutional priorities, behaviors, and decision-making processes. It examines the ethical dilemmas, methodological controversies, and competitive pressures that arise from global ranking systems. **Asian Scientists on the Move** Anju Mary Paul, 2021-12-09. The growing scientific research output from Asia has been making headlines since the start of the twenty-first century. But behind this science story, there is a migration story. The elite scientists who are pursuing cutting-edge research in Asia are rarely homegrown talent but were typically born in Asia, trained in the West, and then returned to work in Asia. *Asian Scientists on the Move* explores why more and more Asian scientists are choosing to return to Asia and what happens after their return when these scientists set up labs in Asia and start training the next generation of Asian scientists. Drawing on evocative firsthand accounts from 119 Western-trained Asian scientists about their migration decisions and experiences, and in-depth analysis of the scientific field in four country case studies (China, India, Singapore, and Taiwan), the book reveals the growing complexity of the Asian scientist migration system.

**Education and Elitism** Conrad Hughes, 2021-04-26. *Education and Elitism* discusses polemical debates around privilege, private schools, elitist universities, equal access to education, and underlying notions of fairness. The overarching question that runs through the book is about the future of education worldwide: how can schools and universities tread the tightrope between access and quality? This book investigates the philosophical positions that characterize elitism and anti-elitism to establish three types: meritocratic, plutocratic, and cultural. These types of elitism and their counter positions are used as reference points throughout the book's analysis of successive educational themes. The conclusion leads to suggestions that bridge the worlds of elitism and egalitarianism worldwide. The book covers critical questions related to the sociology and philosophy of education with particular focus on contemporary

disruptors to education such as the COVID 19 pandemic and protest movements for social justice With an attempt to offer readers an objective overview this book will be an excellent compendium for students academics and researchers of the sociology of education education policy and comparative education It will also be of interest to school leaders university provosts and professionals working in curriculum design

**University Rankings** William Yat Wai Lo, 2014-02-17 This book adopts a qualitative case study approach to provide the readers with a systematic delineation and interpretation of the implications of the university ranking phenomenon for Taiwan's higher education system It reviews the literature on different theories concerning the global transformation of higher education and presents basic information on higher education in Taiwan The author develops a four dimensional framework for the analysis of the ranking phenomenon in the island state First the technological ecological dimension aims to look into how the rankings have impacted Taiwan's higher education based on empirical findings from five Taiwanese public universities Next the technological geographical dimension examines how Taiwan can use rankings to promote its interests in global higher education The two conceptual dimensions focus on the relationship between the rankings and power in higher education They show how the phenomenon can be read and explained through theoretical lenses from ecological and geographical perspectives From an ecological perspective the empirical evidence suggests that the influence of rankings varies throughout the academic hierarchy in Taiwan The theoretical analysis then illustrates the relationship between the ranking phenomenon and the power structure in academic hierarchy

Geographically while the empirical analysis is based on data from Taiwan the theoretical analysis offers essential insights that help readers to understand the changing global landscape of higher education and its implications in East Asia

**Breaking Ranks** Colin Diver, 2022-04-12 Some colleges will do anything to improve their national ranking That can be bad for their students and for higher education Since U S News World Report first published a college ranking in 1983 the rankings industry has become a self appointed judge declaring winners and losers among America s colleges and universities In this revealing account Colin Diver shows how popular rankings have induced college applicants to focus solely on pedigree and prestige while tempting educators to sacrifice academic integrity for short term competitive advantage By forcing colleges into standardized best college hierarchies he argues rankings have threatened the institutional diversity intellectual rigor and social mobility that is the genius of American higher education As a former university administrator who refused to play the game Diver leads his readers on an engaging journey through the mysteries of college rankings admissions financial aid spending policies and academic practices He explains how most dominant college rankings perpetuate views of higher education as a purely consumer good susceptible to unidimensional measures of brand value and prestige Many rankings he asserts also undermine the moral authority of higher education by encouraging various forms of distorted behavior misrepresentation and outright cheating by ranked institutions The recent Varsity Blues admissions scandal for example happened in part because affluent parents wanted to get their children into elite schools by any means necessary Explaining what is most useful and important in evaluating colleges Diver offers both college applicants and educators a guide to pursuing their highest academic goals freed from the siren song of the best college illusion Ultimately he reveals how to break ranks with a rankings industry that misleads its consumers undermines academic values and perpetuates social inequality

**University Rankings, Diversity, and the New Landscape of Higher Education** ,2019-02-18 University rankings are a relatively new phenomenon in higher education Although quite an established practice in the U S it is only within the last decade that attempts to analyse university performance have spread to the rest of the world and that we also have seen new global rankings appear rankings attempting to measure university performance beyond national borders No wonder that this trend is accompanied by a growing interest in studying rankings throughout the world This book is written as part of the effort to better understand rankings and their effects on higher education A serious approach towards university rankings implies that rankings should be analysed properly including the methods used and the indicators chosen and investigate the objectives claimed If university rankings are considered as consumer information then everyone should have an interest in basing such guidance on valid and reliable data and methodology A serious analysis should also discuss the wider implications of rankings as an emerging phenomenon in higher education Consequently the contributions to this book investigate and analyse how different rankings work how they reach their conclusions and on what data and methodology they are built Furthermore it provides a critical reflection about the impact of rankings on higher education
