the public's rudimentary understanding of energy created an age in which sources of industrial power seemed capable of curing the physical limitations and ill health that plagued Victorian bodies. Licensed and quack physicians alike promoted machines, electricity, and radium as invigorating cures, veritable fountains of youth that would infuse the body with energy and push out disease and death. *The Body Electric* is the first book to place changing ideas about fitness and gender in dialogue with the popular culture of technology. Whether through wearing electric belts, drinking radium water, or lifting mechanized weights, many Americans came to believe that by embracing the nation's rapid march to industrialization, electrification, and radiomania, their bodies would emerge fully powered. Only by uncovering this belief's passions and products, Thomas de la Pea argues, can we fully understand our culture's twentieth-century energy enthusiasm.
