[An Introduction to Artificial Intelligence in Education](#) Shengquan Yu, Yu Lu, 2021-11-29. This book systematically reviews a broad range of cases in education that utilize cutting-edge AI technologies. Furthermore, it introduces readers to the latest findings on the scope of AI in education so as to inspire researchers from non-technological fields, e.g. education, psychology and neuroscience, to solve education problems using the latest AI techniques. It also showcases a number of established AI systems and products that have been employed for education. Lastly, the book discusses how AI can offer an enabling technology for critical aspects of education, typically including the learner, content, strategy, tools and environment, and what breakthroughs and advances the future holds. The book provides an essential resource for researchers, students and industrial practitioners interested and engaged in the fields of AI and education. It also offers a convenient handbook for non-professional readers who need a primer on AI in education and who want to gain a deeper understanding of emerging trends in this domain. [AI - The new intelligence in sales](#) Livia Rainsberger, 2022-09-26. This book offers sales managers a quick overview of the possible applications of artificial intelligence in sales and explains basic functionalities. What is behind terms such as Sales Automation, Sales AI Analytics, Sales Enablement, Conversational AI, Lead Intelligence, Dynamic Pricing, Sales Management Intelligence and many more? Where is the concrete potential for sales organizations? And how will AI change the work in sales? The author presents the AI tools available on the market today and their application and describes the advantages and disadvantages as well as the limits and possibilities using clear examples. Executives in marketing and sales as well as entrepreneurs and managing directors, especially in medium-sized companies, will receive answers to the most important questions and additionally concrete recommendations for action for the implementation in their own companies. **Current and Future Role of Artificial Intelligence in Cardiac Imaging** Steffen Erhard Petersen, Karim Lekadir, Alistair A. [Introduction to Empirical Processes and Semiparametric Inference](#) Michael R.

Kosorok, 2007-12-29 The goal of this book is to introduce statisticians and other researchers with a background in mathematical statistics to empirical processes and semiparametric inference. These powerful research techniques are surprisingly useful for studying large sample properties of statistical estimates from realistically complex models as well as for developing new and proved approaches to statistical inference. This book is more of a textbook than a research monograph although a number of new results are presented. The level of the book is more introductory than the seminal work of van der Vaart and Wellner 1996. In fact another purpose of this work is to help readers prepare for the mathematically advanced van der Vaart and Wellner text as well as for the semiparametric inference work of Bickel, Klaassen, Ritov, and Wellner 1997. These two books along with Pollard 1990 and Chapters 19 and 25 of van der Vaart 1998 formulate a very complete and successful elucidation of modern empirical process methods. The present book owes much by the way of inspiration, concept, and notation to these previous works. What is perhaps new is the gradual yet rigorous and unified way this book introduces the reader to the field.
