EN Technology education exists in the tension between societal transformations and digital developments The conference proceedings of the annual meeting of the Deutsche Gesellschaft für Technische Bildung DGTB titled Futures of Technology Education bring together a wide range of contributions that address current discourses and research perspectives in technology education A first thematic focus is on the role of digitalization From an international perspective the development of general technology education in Sweden is

examined highlighting the shift from traditional workshop formats to curriculum anchored digital content Numerous contributions discuss the challenges opportunities and didactic models for teaching digital technologies for example through the use of generative AI structured pedagogical approaches to digitalization or considerations of how to integrate data literacy and machine learning into curricula In addition institutional cooperation formats for fostering digital competencies in prospective teachers as well as training concepts for the transition from primary to lower secondary education are presented A second focus lies on the integration of making and creativity into technology education The volume explores theoretical concepts of maker education alongside task formats and competence development Both potentials such as motivation and self reflection and challenges for instance in the area of technology assessment are addressed The out of school perspective on makerspaces as learning environments is also taken into account especially with regard to structural barriers to cooperation with schools A third area of focus is dedicated to classroom practice interdisciplinarity and inclusion The volume includes contributions on technology education in special education contexts on the reconstruction of historical teaching concepts and on combining analog and digital learning in primary science and technology education Exemplary teaching practices such as methodical teaching sequences or the technical analysis of questionable products illustrate how multi perspective understanding of technology and problem solving learning can be promoted Questions surrounding the professionalization of teachers in general technology education especially in the tension between theory and practice are also addressed Further contributions examine future teacher workforce needs new target groups for teacher education as well as overarching issues such as international comparative perspectives and the critical reflection of artificial intelligence in the education sector The proceedings show The future of technology education is diverse dynamic and shaped by a wide range of research questions The interdisciplinary nature of the contributions underscores the importance of general technology education in the context of profound societal change

Labour Law in Russia Anthony Forsyth,Elena Radevich,2014-11-10
Russias transition towards a market economy in the early 1990s called for new approaches to the regulation of employment relations in the post Soviet period in order to strike a balance between employers interests and employees rights in changed conditions The adoption of the Labour Code of the Russian Federation LC RF in 2001 contributed to solving the issue only partly as in reality it was passed as a compromise between different political forces and consists of both provisions which can be implemented in the new context of the market economy and restrictions inherited from the planned economy The recent and ever changing socio economic conditions and the increasing complexity of the employer employee relationship which is a result of both globalization and technological progress required the further development of Russian employment legislation This resulted in substantial amendments being made to the original LC RF in 2006 with the majority of its provisions being profoundly revised Nevertheless a thorough analysis of the changes currently under way shows that many aspects concerning employment relations have still not been addressed sufficiently The papers collected in the present volume of the

Federal Communications Commission, 2007-09 Theories, Models, and Practices of Literacy Misty Sailors, Idalia Nuñez, Vaughn W. M. Watson, James

V. Hoffman, Donna E. Alvermann, 2025-11-11 This eighth edition of *Theoretical Models and Processes of Literacy* a foundational text in literacy research is updated to represent a new era in contemporary and critical scholarship. With a revised name, the intentional inclusion of diverse perspectives and new organizational structure, *Theories, Models, and Practices of Literacy* thoroughly represents the theories that drive literacy and the scholars who write about and within the field. While still representing the most comprehensive source for connecting theories to literacy research and practice, this eighth edition builds on preceding editions, contextualizing its historical roots, promoting and highlighting contemporary and critical theories, and envisioning future directions in literacy. This volume addresses theories across ten sections including early youth and community literacies, teaching literacy and literacy teacher education, disabilities and disciplinary literacy, theories digital and multimodal literacies, and the disruption of colonial boundaries in language and global literacies. The chapters in this volume are curated to inspire the interrogation of literacy theory and foster its evolution. Additional archival essays from previous editions will remain available as Support Material on the book's webpage. New to the eighth edition: 80% new material and significantly revised previous materials to reflect emerging and contemporary theories and scholarship. A more globalized approach to theorizing literacy practices, including those with onto-epistemological perspectives rooted in people's lived experiences, literacies and languages to engage scholars and audiences who may be new users of the text. Focus on theories that actively challenge traditional theoretical literacy frames and raise critical consciousness toward communities marginalized by the white gaze historically represented in literacy theory, literacy research, and literacy education. New avenues for readers to explore how theory informs practice, practice informs theory, and how both are taken up in various contexts, e.g., classrooms, schools, communities, and societies.
