CHAPTER OVERVIEW

This chapter introduces students to characteristics of organizations and to the perspective that organizations are systems of interrelated units that have to adapt to their environment to survive. Definitions and examples are given to provide students with an understanding of the importance of organizational theory in becoming better managers and leaders in a rapidly changing world. The Hudson's Bay Company (HBC) case that opens the chapter is an interesting case to refer to during the semester and to update using current business analyses.

Organizational theory is discussed in historical stages and is shown to have practical application for managers. A framework for the content and topic of each chapter is also provided. Instructors can use this as an introductory overview and also as a frame of

are essential in organizational change. They focus on introducing the kind of learning and development that shapes a self-sustaining developmental process that is an integral part of the daily activities of an organisation. This process is essentially one of collective reflection in order to develop alternatives for action, experimentation to achieve desired goals, then collective reflection on the results achieved. Reflection on own practice can contribute to direct improvements of own practice but may also contribute to new practices, new frameworks of understanding and to processes involving other participants and fields of interaction. The first part of the book provides an introduction to participative change management and particularly to the concept of co-generative learning inherited from action research in which change becomes a joint management and employee learning, development and knowledge creating process. In the second part, the focus of each chapter is on an aspect of the practice of leading change. There is practical guidance for leaders, internal problem owners, external change agents or action researchers on how employees can be actively engaged in shaping their own work conditions. Readers will learn how experiencing negative results as well as success can form a basis for continued development even on how to handle an organisational development process when it is in terminal trouble to ensure there is still learning from it. Resilient and

Responsible Smart Cities Hassan Abdalla, Hugo Rodrigues, Vimal Gahlot, Mohammad Salah Uddin, Tomohiro Fukuda, 2022-03-01. This book aims to establish a community with attention to land use to achieve sustainable development and meet the needs of today's society. Urban planning depends on engineering, architectural, social and political pillars. It pursues this by proposing solutions regulating environmental pollution and non-sustainable use of available resources. It showcases and even triggers further debate about connections between sustainable development, urban planning and technology in hopes of achieving sustainable development models that sustain urban expansion and shape cities that improve the overall quality of life. It views urban planning and development as vital fields that ensure the application of revolutionary approaches with new materials and processes incorporated in the most efficient manner.
