The Semantic Web - ISWC 2005

Yolanda Gil, Enrico Motta, V. Richard Benjamins, Mark Musen, 2005-10-17 A little over a decade has passed since the release of the first Netscape browser In 1995 the World Wide Web was viewed largely as an academic curiosity Now of course the Web is an integral part of the fabric of modern society It is impossible to imagine science, education, commerce or government functioning without the Web We take the Web for granted and often assume that Internet connectivity is guaranteed to all of

us as a birthright Although the Web indeed has become world wide and has lost a bit of its original aura as a consequence of its ubiquity a burgeoning community of researchers and practitioners continues to work toward the next generation of the Web a Web where information will be stored in a machine processable form and where intelligent computer based agents will access and automatically combine myriad services on the Internet of the kind that are now available only to people interacting directly with their Web browsers

International Handbook of Internet Research Jeremy Hunsinger,Lisbeth Klastrup,Matthew

Allen,2010-06-17 Internet research spans many disciplines From the computer or information sciences through engineering and to social sciences humanities and the arts almost all of our disciplines have made contributions to internet research whether in the effort to understand the effect of the internet on their area of study or to investigate the social and political changes related to the internet or to design and develop software and hardware for the network The possibility and extent of contributions of internet research vary across disciplines as do the purposes methods and outcomes Even the epistemological underpinnings differ widely The internet then does not have a discipline of study for itself It is a field for research Baym 2005 an open environment that simultaneously supports many approaches and techniques not otherwise commensurable with each other There are of course some inhibitions that limit explorations in this field research ethics disciplinary conventions local and national norms customs laws borders and so on Yet these limits on the internet as a field for research have not prevented the rapid expansion and exploration of the internet After nearly two decades of research and scholarship the limits are a positive contribution providing bases for discussion and interrogation of the contexts of our research making internet research better for all These limits challenges that constrain the theoretically limitless space for internet research create boundaries that give definition to the field and provide us with a particular topography that enables research and investigation
